Cơ chế Tính Thưởng Khai Thác - Dynamic Mining Reward

Công thức chính:

```
Base Mining Rate = (Tổng số token phát mỗi ngày × Hệ số hiệu quả mạng) ÷ Số lượng node đang hoạt động
```

```
Phần thưởng mỗi giờ = Base Mining Rate × Hiệu suất cá nhân × Hệ số đóng góp theo thời gian
```

Giải thích đơn giản:

- Mỗi ngày, iFlux có một lượng token cố định chia cho toàn mạng -> giúp kiểm soát lạm phát.
- Hệ số hiệu quả mạng phụ thuộc vào:
    - Độ phân bố node theo khu vực
    - Thời gian hoạt động ổn định của toàn mạng
    - Chất lượng dữ liệu thu thập
- Hiệu suất cá nhân giúp thưởng đúng cho người dùng có hoạt động thực sự chất lượng.

Hệ số Địa Lý - Geographic Multiplier

Giá trị dao động từ 0.8 đến 1.2

- 0.8: Khu vực đã có quá nhiều người đào (ví dụ như châu Á)
- 1.0: Khu vực cân bằng (như châu Âu)
- 1.2: Khu vực còn ít người đào (như châu Phi)

Lý do áp dụng:

- Khuyến khích người dùng ở khu vực mới -> mở rộng mạng lưới toàn cầu
- Hạn chế việc giả mạo vị trí để trục lợi

Thời Gian Hoạt Động Node - Node Uptime Coefficient

Công thức: `(Uptime cá nhân ÷ Uptime trung bình toàn mạng)^0.7`

- Nếu uptime cao hơn trung bình -> thưởng thêm
- Nếu thấp hơn -> bị trừ điểm
- Mũ 0.7 giúp tránh phần thưởng bị lệch quá nhiều (không phải càng online 24/7 là càng có lợi quá mức)

Điểm Danh Tiếng Node - Node Reputation Scoring

Điểm danh tiếng dựa trên:

1. Độ xác thực dữ liệu
2. Mức độ liên quan đến crypto
3. Khả năng phát hiện nguy cơ (scam, phishing…)
4. Tính ổn định qua thời gian
5. Khu vực đóng góp
6. Sự tích hợp nền tảng
7. Khả năng chống bot

Kết hợp lại tạo ra điểm danh tiếng tổng -> dùng để tính phần thưởng

Phân Bổ Tài Nguyên AI

- 40% dùng để huấn luyện AI phát hiện scam/phishing
- 35% dùng phân tích thị trường (trends, sentiment…)
- 25% giúp bảo vệ cộng đồng (cảnh báo, chia sẻ mối đe dọa)

Tại sao chia như vậy?

- Ưu tiên bảo vệ người dùng
- Giúp cộng đồng giao dịch thông minh hơn
- Xây hệ sinh thái an toàn lâu dài

Cơ Chế Bảo Mật Dữ Liệu - Differential Privacy

- **ε = 0.1** -> mức bảo mật cao (Apple và Google dùng ε = 1-10)
- **δ = 10^-5** -> xác suất bị lộ thông tin gần như bằng 0

Ứng dụng:

- Dữ liệu người dùng được làm mờ (noise) trước khi đưa vào AI -> bảo vệ quyền riêng tư tối đa

Cơ Chế Giới Thiệu - Referral System

- F1 (người trực tiếp giới thiệu): 5%
- F2: 3%
- F3: 2%
  -> Tổng tối đa chỉ 10% để đảm bảo bền vững và tránh mô hình đa cấp

Hệ Số VIP - VIP Multiplier (đang phát triển)

Công thức thưởng nâng cao cho người dùng tốt:

- Dựa trên: Danh tiếng node × Mức độ ổn định × Mức độ sử dụng nền tảng
  -> Thưởng thêm cho người gắn bó và đóng góp thực sự, không chỉ chạy số

Cơ Chế Đốt Token - Burn Mechanism

Token bị đốt hàng tháng gồm:

- Phí lãi suất (installment): 100% bị đốt
- Phí phạt trễ hạn: 100% bị đốt
- Phí swap: 1% của mỗi lần swap bị đốt

-> Giúp giảm nguồn cung $IFLUX -> tạo áp lực tăng giá và bảo vệ giá trị cho holder

Hệ Số Hiệu Suất Mạng - Network Efficiency Factor

Công thức: `0.85 + (0.15 × Điểm chất lượng mạng trung bình)`

- Dựa vào 4 yếu tố:
    1. Độ cân bằng địa lý toàn mạng
    2. Uptime trung bình
    3. Chất lượng dữ liệu toàn mạng
    4. Mức độ chống gian lận

Tại sao đặt nền 0.85?

- Dù mạng yếu vẫn có thưởng cơ bản
- Tăng theo chất lượng nhưng không tạo biến động quá lớn

Kết Luận - Tại Sao Các Công Thức Này Hợp Lý?

1. **Cân bằng game:**
    - Mỗi công thức ngăn việc lạm dụng (bot, fake location…)
    - Không ai có thể farm đơn giản bằng cách spam
2. **Bền vững kinh tế:**
    - Token phân phối dựa trên giá trị thật (doanh thu, nền tảng…)
    - Cơ chế đốt giúp giữ giá trị
3. **Tính khả thi kỹ thuật:**
    - Tính toán nhẹ, áp dụng real-time
    - Bảo mật cao và mở rộng tốt
4. **Công bằng với người dùng thật:**
    - Thưởng theo chất lượng chứ không chỉ theo số lượng

- Cân bằng khu vực, chống bot, khuyến khích tham gia lâu dài

iFlux Global Mining Node - Docs Structure

1. Getting Started

- **Introduction**: DePIN Hub for AI Innovation
- **3 Key Components**: Chrome Extension + Future AI Training + Token Integration
- **Quick Actions**: Download Extension, Create Account
- **Learn Sections**: Story, Architecture, Tokenomics, How-to-Guide

2. The Story Behind iFlux DePIN

- **Summary**: Surveillance capitalism vs Fair DePIN solution
- **Market Context**: Data economy explosion ($294B -> $417B market)
- **Current Problems**:
    - Surveillance capitalism (Meta $53/user, Google $60/user)
    - DePIN disappointment (insiders get 65-80%, users get cents)
- **Dual Exploitation**: Users work multiple unpaid jobs
- **iFlux Solution**: First truly fair DePIN (50% to community)

3. $IFLUX Token

- **Basic Info**: 4,444,444 supply, BEP20, BSC
- **Allocation**: Community 50%, DEX 20%, Partners 20%, Team 10%
- **Vesting**: Community 70% unlocked at TGE
- **Utilities**: Rewards, Governance, DeFi, Platform Integration
- **Deflationary**: Burn interest, penalties, swap fees

4. How-to-Guide

- **Setup**: Sign up -> Download extension -> Accept consent -> Start mining
- **Add Nodes**: Dashboard -> Add Node -> Install on new device
- **Earning Methods**:
    - Mining (complex formula with 0.8-1.2x geographic multipliers)
    - Referrals (Will update later)
    - Enhanced Contributor System (in development)
    - Daily tasks & engagement
- **Claiming**: Manual claim from dashboard to wallet
- **Important Notes**: 1 node per IP, consistent usage, platform integration benefits

5. Architecture

- **Overview**: Consensual Data Intelligence Network (CDIN)
- **Core Components**: Chrome Extension -> Data Processing -> Future AI Training
- **Data Collection**: Website safety, market trends, threat intelligence (NO personal data)
- **Node Reputation**: Authenticity + Relevance + Freshness + Availability scoring
- **Reward Distribution**: Revenue-backed, community-first allocation
- **Security & Privacy**: Multi-layer encryption, differential privacy
- **Ecosystem Integration**: Platform synergy, future AI benefits

Getting Started

Introduction

iFlux Global Mining Node - DePIN Hub for AI Innovation

iFlux Global Mining Node is a feature within the iFlux Global ecosystem - a comprehensive DePIN (Decentralized Physical Infrastructure Network) solution on a mission to democratize data ownership and create the first truly fair ecosystem where users can really earn what they give.

The iFlux Global Mining Node infrastructure consists of three key components:

1. **The Chrome Extension** lets users contribute consensual browsing data while earning immediate $IFLUX token rewards that can be claimed directly to their wallets.
2. **The AI Training Process** collects anonymized user data to develop AI models designed for future community protection features, including scam detection and market analysis capabilities.
3. **The Token Ecosystem Integration** enables earned $IFLUX tokens to be used across our proven platform features - including Token Installment purchases and Daily Earn rewards - once tokens are listed on iFlux, along with other exchanges and gain market value.

> *"Finally, a DePIN where the community gets 50% of the rewards, not the insiders. Your data, your choice, your earnings".*

Join iFlux Global Mining Node

If you're ready to start earning while protecting the crypto community, download the iFlux Global Mining Node extension and begin earning $IFLUX tokens today.

The Story Behind iFlux DePIN

Summary

The global data economy has transformed into a systemic ecosystem where major technology corporations continuously extract, monetize, and profit extensively from user data, while individuals who generate this data receive minimal or no direct compensation.

This phenomenon, described as surveillance capitalism by Emerita Shoshana Zuboff - Professor of Harvard Business School in "The Age of Surveillance Capitalism: The Fight for a Human Future at the New Frontier of Power", produces hundreds of billions of dollars in annual revenues derived from our digital lives.

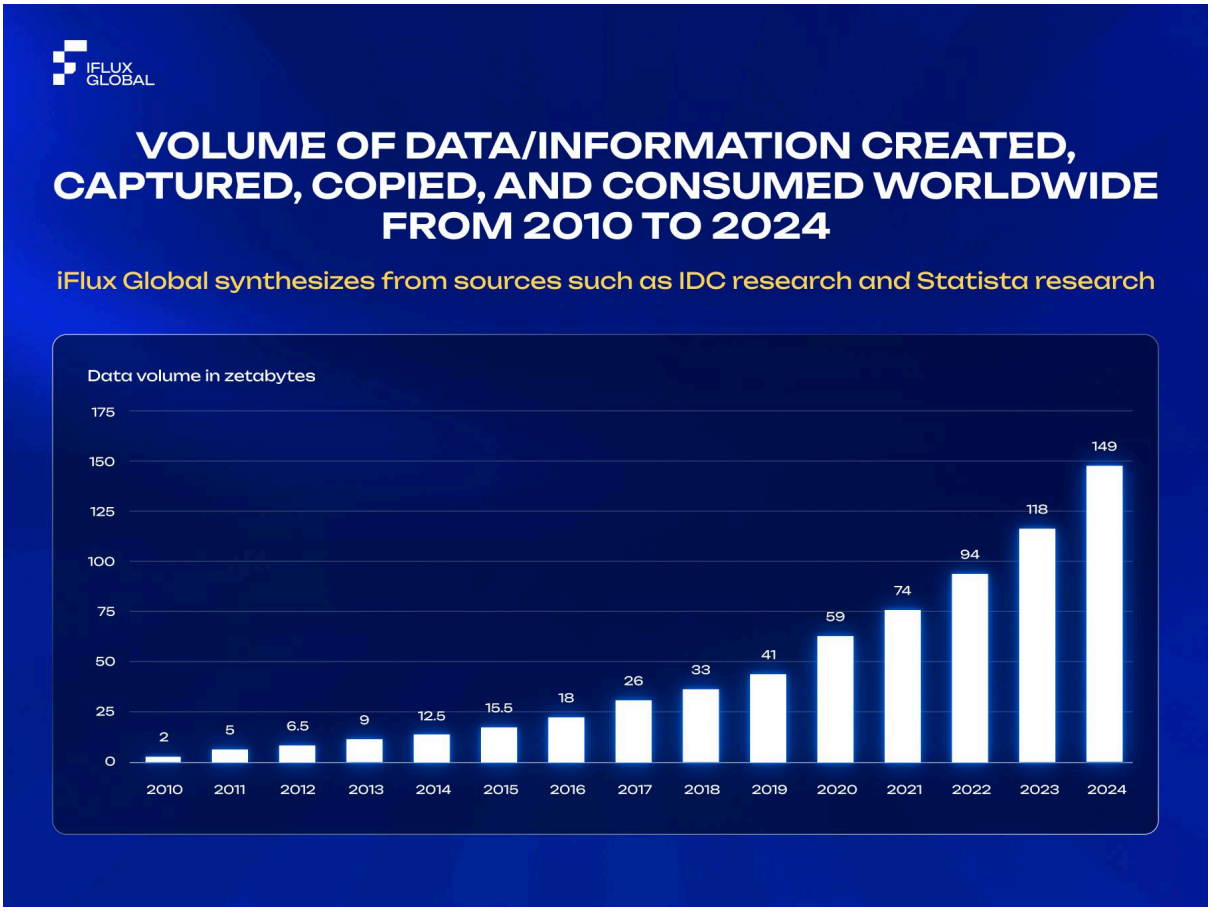

Although the emerging Decentralized Physical Infrastructure Network (DePIN) industry proposes a more equitable alternative by rewarding contributors with tokens, many projects replicate inequitable tokenomics, favoring insiders over users.

In that setting, the iFlux Global Mining Node offers a groundbreaking solution: the first truly fair DePIN platform, allocating 50% of tokens directly to contributors while fostering AI-powered community protection through consensual data sharing.

Market Context: The Data Economy Explosion

The Scale of Global Data Generation

Global data creation is growing at an unprecedented rate. According to IDC research, the global datasphere reached 120 zettabytes in 2023, with projections estimating 181 zettabytes by 2025. To put this massive scale in perspective, storing 120 zettabytes on standard DVDs would require approximately 25 billion DVDs, rising to 38 billion by 2025. This represents a staggering 6,000% increase from the 2 zettabytes recorded in 2010 according to Statista research.

This exponential growth is fueled by expanding internet access, IoT proliferation, and digital content creation driven by remote work and online engagement. Over 90% of this data is unstructured, with 70-80% generated directly by users through clicks, searches, and social media interactions. Every digital action you take contributes to this massive data generation engine that powers the modern economy.

The Economic Value of Data

This data surge creates immense economic value, but benefits flow primarily to corporations rather than the individuals who generate the information. The global Big Data and analytics market was valued at 307.52 billion in 2023 and is projected to grow from USD 348.21 billion in 2024 to USD 961.89 billion by 2032, exhibiting a CAGR of 13.5% during the forecast period, according to Fortune Business Insights.

The global data broker market, which specializes in trading personal and behavioral data, represents another massive revenue stream. This industry was worth $270.40 Bn in 2024 and is expected to reach $473.35 Bn by 2032, at a CAGR of 7.25%. These firms monetize user data including browsing habits, purchases, and preferences, often without user consent or compensation.

Yet despite this enormous market growth, the individuals creating this data receive no share of the profits. It's comparable to miners in a gold rush where only corporations own the mines and keep all the wealth, while the actual miners receive nothing for their labor.

The Current State of Data Usage: Surveillance Capitalism

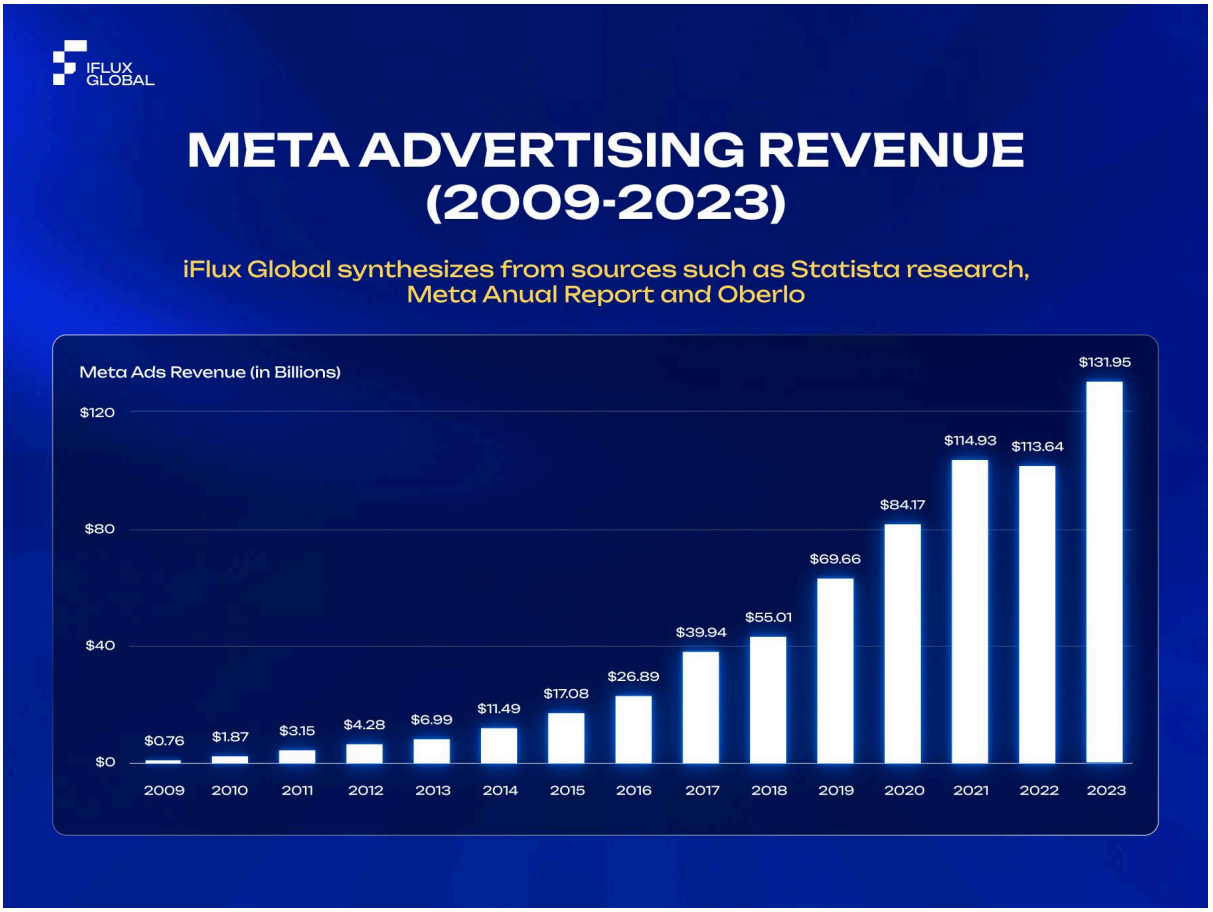

Understanding Surveillance Capitalism

Surveillance capitalism, as defined by Harvard Professor Shoshana Zuboff, fundamentally redefines capitalism by selling predictions of user behavior rather than traditional products. Picture the difference between a farmer selling apples at a market versus that same farmer secretly tracking customers' eating habits and selling that behavioral data to retailers and insurance companies without customer consent.

This model relies on four fundamental pillars that work together to extract maximum value from user activities. First, continuous data extraction where every digital interaction is recorded and stored. Second, AI-driven behavioral prediction where algorithms analyze patterns to forecast future actions. Third, monetization via targeted advertising where predictions are sold to companies wanting to influence behavior. Fourth, engagement control designed to maximize data generation by keeping users online and active.

The Scale of Corporate Data Monetization

Tech giants have built empires worth trillions of dollars on this surveillance capitalism model. In 2023, Meta generated $131.95 billion in revenue, with 98% derived from advertising based on user data according to their annual report. This translates to approximately $53 per user annually that Meta extracts from your digital activities while providing you zero direct compensation.

Google's advertising revenue reached $237.86 billion in 2023, processing 8.5 billion daily searches. Each search query feeds their data-driven advertising empire, contributing to revenue streams that dwarf most national economies. Your searches, location data, and online behavior generate substantial profits for Google while you receive no monetary return.

The Cambridge Analytica scandal provides a stark illustration of how this system operates and the minimal consequences companies face for exploitation.

In 2018, data from 87 million Facebook profiles was harvested without consent for political targeting purposes, as reported by The Guardian. The resulting $5 billion FTC fine in 2019 represented merely one month's revenue for a company earning $70 billion annually.

Tellingly, Meta's stock price actually rose following the fine announcement, demonstrating the market's indifference to such penalties.

The User Exploitation Reality

While companies profit enormously from data, the creators of that data receive nothing. Over 90% of enterprises invest in Big Data analytics specifically because it boosts profits by 8-10% according to McKinsey research, yet users who generate this valuable information see no share of the returns.

Poor data quality costs the U.S. economy an estimated $3.1 trillion annually, but users bear the burden of exploitation while receiving no compensation for the value they create.

This exploitation particularly affects lower-income populations who rely disproportionately on "free" applications. Research demonstrates that free apps harvest data four times more aggressively than paid applications, creating a digital divide where those who can least afford privacy loss are most heavily exploited.

Every interaction on a free platform represents unpaid labor. Your clicks, searches, posts, and digital behaviors generate billions in corporate profits while exposing you to privacy risks and receiving zero monetary compensation. You're essentially working multiple unpaid jobs that make corporations wealthy while you bear all the costs and risks.

The Rise of DePIN: Promise vs. Reality

The DePIN Revolution Promise

Decentralized Physical Infrastructure Networks (DePIN) emerged as a blockchain-based solution designed to disrupt the surveillance capitalism model by rewarding users for contributing resources like bandwidth, storage, or computing power with tokens. The vision promised to democratize infrastructure ownership, allowing users to own and operate the networks while sharing in the economic rewards as these networks grew.

By July 2025, the DePIN market had surpassed $37 billion in capitalization, with daily trading volumes approaching $3.5 billion, according to CoinMarketCap.

According to Crypto Rank (compiled by iFlux Global), more than $1.8 billion has been invested into DePIN projects, as institutional investors see this sector as a promising gateway for mainstream Web3 adoption.

The fundamental promise was revolutionary: instead of corporations owning all infrastructure and keeping all profits, users would own the infrastructure and share rewards proportionally to their contributions.

The Tokenomics Reality Check

However, examination of actual DePIN project implementations reveals that many replicate the same inequitable distribution patterns found in corporate surveillance capitalism. Industry analysis shows that most DePIN projects allocate only 20-35% of tokens to community contributors, while directing 65-80% to insiders including investors, team members, and early backers.

This allocation structure means that users providing real resources like bandwidth or hardware must compete with millions of other contributors for a small fraction of the total

token supply. Meanwhile, investors and insiders who contributed capital rather than infrastructure receive the majority of tokens, often with more favorable vesting terms and earlier access to liquidity.

The mathematical reality undermines the promise of fairness. If you contribute bandwidth, run hardware, or provide infrastructure services, you're sharing a diluted reward pool with millions of other users while insiders claim the majority of value from your collective efforts.

The Community Disappointment Pattern

Recent DePIN launches have consistently generated community backlash due to the gap between promises and reality. Projects typically attract millions of users during beta phases with promises of fair rewards and decentralized ownership. Users invest significant time and resources running infrastructure, contributing bandwidth, and building networks based on these promises.

When token distributions finally occur, communities often discover that tokenomics heavily favor insiders over actual contributors. One prominent example involved a project that attracted over 1 million users in its beta phase with promises of fair rewards. When tokens were distributed in October 2024, individual user rewards were valued at mere cents despite months of infrastructure contribution.

The tokenomics structure revealed the underlying problem: approximately 60% of tokens went to insiders and investors, with only 25% allocated for community contributors. This community allocation was then diluted across millions of participants, resulting in minimal individual rewards. Opaque points systems further obscured reward calculations until final distribution, fueling widespread community backlash and undermining trust in the DePIN model.

The Problem: Systemic Dual Exploitation

The Two-Front Attack on User Value

Modern internet users face coordinated exploitation from both traditional tech giants and supposedly "decentralized" DePIN projects. This dual exploitation creates a system where users provide labor and resources through multiple channels while receiving minimal compensation from any source.

Surveillance capitalism extracts data without meaningful compensation, generating $50-60 per user annually for major platforms while users receive zero direct return. DePIN projects promised to fix this inequality but often deliver insider-heavy token distributions where users earn $10-50 annually despite significant time and resource investments.

The combined effect creates a system where users work multiple unpaid jobs across different platforms and protocols, generating substantial value for corporations and crypto insiders while bearing all costs and receiving minimal compensation.

The Mathematics of Exploitation

Understanding the actual financial impact reveals the scale of this exploitation system. Your digital activity generates approximately $53 annually for Meta through advertising revenue based on your data. Google extracts $60+ annually from your searches and online behavior. Various other platforms and services generate $20-30 each from your digital footprint, creating a total annual value extraction of $150-200 per user across multiple platforms.

Meanwhile, your direct compensation for generating this value remains at zero dollars. You receive "free" services in exchange for data that generates substantial corporate profits, but no share of the monetary value your digital labor creates.

DePIN participation involves additional costs including internet bandwidth, electricity for hardware operation, and significant time investment for maintenance and optimization. Despite these real expenses and opportunity costs, DePIN rewards often total less than $50 annually, far below the $500+ fair value that infrastructure contributions should command based on the economic value generated by these networks.

The Compounding Disadvantage Effect

This dual exploitation creates a compounding disadvantage cycle that worsens over time. Users invest hours daily across multiple platforms contributing data and maintaining infrastructure, representing unpaid labor that generates billions in corporate and crypto project profits. Real out-of-pocket expenses for internet, electricity, and hardware create additional costs that users must bear.

Privacy sacrifices across multiple services expose personal information without compensation, creating long-term risks and potential costs. Opportunity costs represent the income users could have earned through traditional employment instead of contributing to platforms that don't fairly compensate their participation.

The system perpetuates itself through information asymmetry where most users don't understand the true value they generate, lack of genuine alternatives until recently, network effects that prevent individual users from effectively organizing against large platforms, complexity that obscures true economics behind technical jargon and complicated tokenomics, and sunk costs where users feel invested in platforms where they've already contributed significant time and resources.

This creates a situation comparable to working multiple unpaid jobs that generate significant wealth for others while you bear all expenses and risks. It's like being factory workers who pay for their own tools, electricity, and workspace, receive no wages, while factory owners become wealthy from your production.

The Solution: iFlux Global Mining Node

What is iFlux Global Mining Node?

iFlux Global Mining Node is best described as a data-driven decentralized infrastructure network (DePIN) that aggregates consensual user browsing data to build comprehensive AI models for future community protection systems.

It operates as a feature within the iFlux Global ecosystem, representing a new evolution of DePIN that focuses on collecting digital intelligence to train AI rather than operating traditional physical infrastructure.

What this means is that:

1. **Internet Users** can unlock the revenue potential of their browsing activities by contributing anonymized data that will be used to train AI models designed to protect the crypto community, earning immediate $IFLUX token rewards for their data contributions.
2. **The Community** is collectively building an AI system that will eventually provide real-time threat detection, scam warnings, market intelligence, and trading insights - creating the foundation for a safer, more informed crypto environment once the AI training is complete.
3. **The Future Ecosystem** will benefit from AI models trained on millions of users' consensual data, creating sophisticated protection systems that can identify scams, detect market manipulation, and provide trading intelligence based on collective community intelligence.

Key Innovations of iFlux DePIN Model

Revolutionary Fair Distribution Model

Traditional DePIN focuses on underutilized physical resources like unused storage or bandwidth, typically allocating only 20-35% of tokens to community contributors while insiders claim 65-80%. iFlux Global Mining Node represents the first DePIN platform designed from inception to prioritize actual contributors over speculators and insiders.

Our token allocation ensures that 50% of all tokens go directly to community contributors who actually build and maintain the network, representing 2,222,222 $IFLUX tokens dedicated exclusively to mining rewards, tasks, and airdrops for active participants.

Unlike projects that favor insiders with immediate token access while imposing lengthy restrictions on community rewards, 70% of our total token supply is available immediately at launch for community claiming and use.

Consensual Data Infrastructure

Unlike surveillance capitalism's covert data extraction, iFlux Global operates on complete transparency and explicit user consent for all data collection activities.

Users download a Chrome extension with clear, understandable explanations of all functionality and choose exactly what browsing data to share through explicit opt-in controls.

We collect only website safety data to help identify scam sites and phishing attempts, market trend information through anonymized browsing patterns that reveal emerging crypto opportunities, and community threat intelligence showing patterns that help protect other users from fraud.

We specifically do not collect personal identification information, private messages, financial account details, or any data that users don't explicitly choose to share.

Building Future AI Protection Systems

Traditional surveillance capitalism deploys AI to manipulate user behavior for corporate profit maximization. Our AI development serves the opposite purpose: collecting data now to build future AI systems that will protect and empower the crypto community.

The training datasets being built will eventually power real-time scam detection with instant popup warnings, rug pull early warning systems that analyze project patterns, market manipulation detection for coordinated schemes, and trading intelligence that offers sentiment analysis and trend identification.

The fundamental difference is that instead of using AI to sell products or manipulate behavior, our future AI systems will help users make better decisions and protect their crypto investments.

Lower Barrier to Entry

Traditional DePIN often requires significant hardware investment and technical expertise, creating barriers for most users. Our browser-based approach makes participation accessible to millions of users worldwide with just an internet connection.

The system requires no hardware investment beyond a standard computer, involves simple setup through browser extension installation, and ensures minimal resource usage that runs efficiently without slowing down computers or significantly impacting internet bandwidth.

Integration with Proven Financial Services

Unlike speculative DePIN projects with theoretical use cases, iFlux Global Mining Node builds upon an established platform with demonstrated revenue generation and growing user adoption.

Our existing Token Installment Service already processes substantial transaction volumes, while the Daily Earn feature currently provides 12% annual percentage rate to token holders. This revenue-backed sustainability means that platform fees from actual economic activity fund token distribution rather than relying purely on speculative investment.

After token listing on exchanges, users can utilize earned tokens for installment down payments, participate in Daily Earn programs with mined tokens, access enhanced platform features, and exercise governance rights.

Immediate Value with Future Benefits

While traditional DePIN often requires months or years to generate meaningful network effects, our model provides immediate $IFLUX token rewards for data contribution while building toward comprehensive AI protection systems.

Users receive direct token rewards that can be claimed immediately to their wallets without delay or artificial restrictions, eliminating points conversion systems and hidden calculations that obscure true reward values. The "Earn What You Give" philosophy ensures compensation is directly proportional to contribution, with users receiving immediate value for participation rather than promises of future rewards.

This represents an evolution of DePIN that addresses the digital age reality: data and intelligence are infrastructure just as much as storage and bandwidth.

By treating user-generated intelligence as a valuable community resource and fairly compensating contributors, we're building the first DePIN network designed specifically for the crypto economy's protection and growth needs.

The "Earn What You Give" Philosophy in Action

iFlux Global Mining Node operates on the revolutionary principle that compensation should be directly proportional to contribution, and users should receive immediate value for their participation rather than promises of future rewards. This philosophy manifests through immediate benefits including direct token mining through simple browser extension usage, zero investment requirements with no upfront costs or specialized hardware needed, real-time reward accumulation that users can track and claim continuously, and community protection benefits where users both contribute to and benefit from collective security efforts.

Integration benefits available after token listing include capital efficiency improvements where users can deploy earned tokens as down payments for crypto purchases through our installment system, compound earnings opportunities through Daily Earn participation using mined tokens, enhanced platform access including premium features and reduced transaction costs, and governance participation allowing users to vote on platform development and policy decisions.

Ongoing protection benefits provide AI-powered security including early warnings about malicious websites and fraudulent projects, community intelligence through collective threat detection and information sharing, market insights enabling better investment decision-making through shared analysis, and fraud prevention through collective defense against scams and market manipulation.

Technological Advantages

Our Chrome extension approach provides unique advantages that make participation accessible to millions of users rather than limiting access to technical specialists with expensive hardware. The system requires no hardware investment beyond a standard computer with internet access, enabling global participation regardless of technical infrastructure or economic resources available for specialized equipment.

Simple setup involves installing the browser extension, activating the mining node, and immediately beginning to earn rewards without complex configuration or maintenance requirements. Minimal resource usage ensures the system runs efficiently without slowing down computers or significantly impacting internet bandwidth, making participation viable for users with modest technical resources.

Software-based infrastructure scales infinitely without physical limitations, constraints, or bottlenecks that affect hardware-dependent DePIN models. Automatic updates deploy security patches and feature improvements seamlessly without user intervention. Cross-platform compatibility includes planned expansion to mobile devices and additional browsers. Cost efficiency eliminates shipping, logistics, and hardware manufacturing expenses that create barriers in traditional DePIN models.

Anti-cheat mechanisms ensure fair participation through IP-based limitations that prevent large-scale farming by restricting participation to one node per IP address. Real-time monitoring systems detect and prevent suspicious activity automatically. Geographic distribution algorithms ensure global participation rather than concentration in specific regions. Behavioral analysis deploys AI to detect and prevent fraudulent participation patterns while protecting legitimate users.

Building the Future of Fair Data Economics

iFlux Global Mining Node addresses the fundamental problems that have created widespread disappointment with both surveillance capitalism and existing DePIN implementations. Instead of unfair distribution systems that favor insiders, we provide 50% token allocation directly to actual contributors. Rather than hidden reward calculations that obscure true value, we offer transparent, real-time tracking of direct token rewards.

Instead of high barriers to entry requiring technical expertise or capital investment, we provide a simple browser extension accessible to anyone with internet access. Rather than speculative token models with no real utility, we offer integration with a proven financial platform providing immediate and growing value. Instead of corporate data exploitation, we enable consensual data sharing that benefits contributors and the broader community.

This comprehensive approach creates the first truly fair decentralized infrastructure platform where users earn what they give, benefit from what they build together, and participate in an ecosystem designed to serve their interests rather than extract value from their contributions. The future of the data economy doesn't need to replicate the inequalities of surveillance capitalism or the broken promises of current DePIN implementations.

With iFlux Global Mining Node, we're building that equitable future today, ensuring that the substantial value created by users flows back to users while fostering innovation that serves the community rather than exploiting it for corporate or insider benefit.

$IFLUX Token

$IFLUX Tokenomics

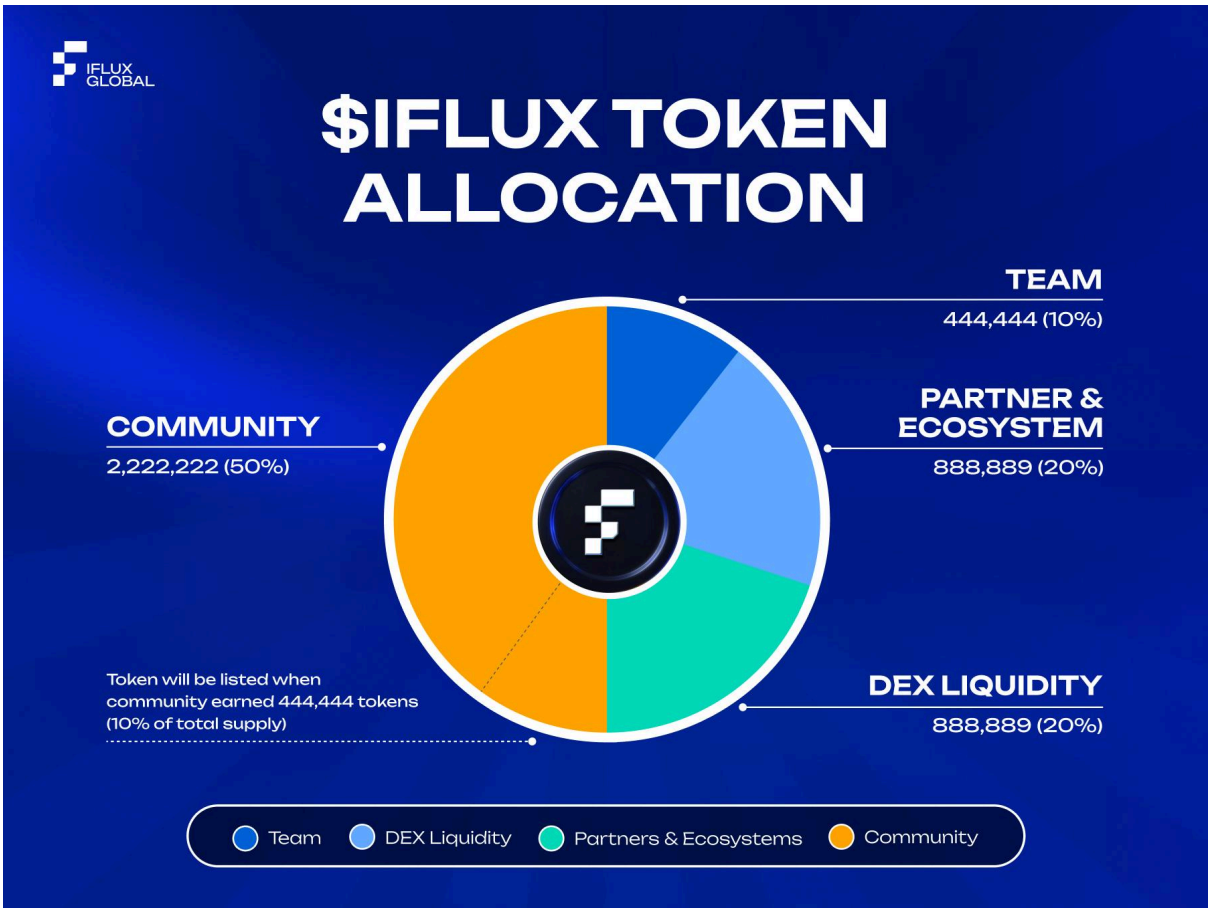

$IFLUX is the native token of iFlux Global Mining Node and the broader iFlux Global ecosystem.

- **Token name**: iFlux Global

- **Ticker**: IFLUX
- **Token Standard**: BEP20
- **Blockchain**: Binance Smart Chain
- **Token Type**: AI, Governance, Utility
- **Contract address:** 0x96024Fb0260d8D3cb5b7087EE3AC0907173B3417
- **Token Supply**: 4,444,444 $IFLUX
- **Token Circulating Supply**: Updating…

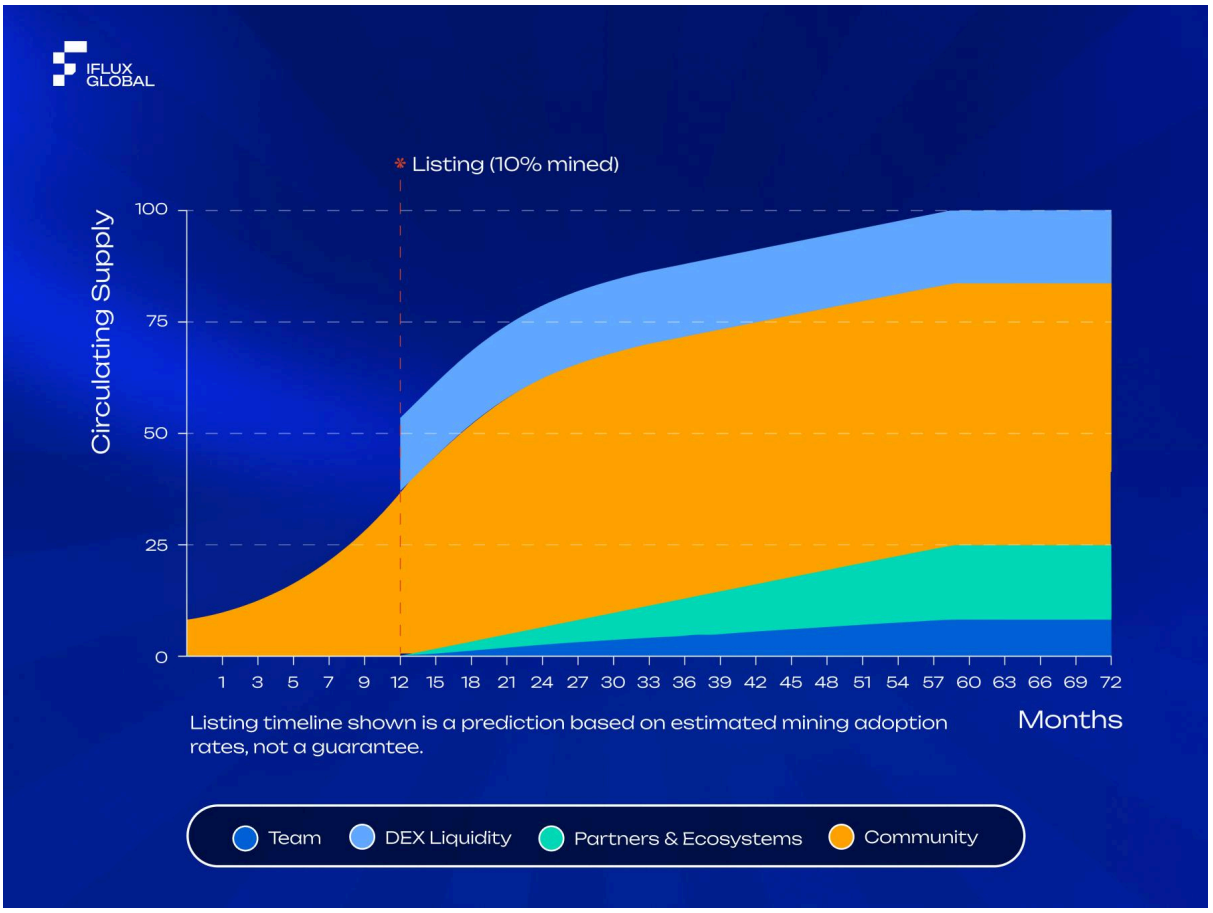

$IFLUX Token Supply Allocation

- **Community - 2,222,222 (50%)** The highest percentage ever allocated to actual contributors in a major DePIN project, dedicated to mining rewards, bonus tasks, and airdrops for active participants.
- **DEX Liquidity - 888,889 (20%)** Tokens allocated for decentralized exchange liquidity provision to ensure immediate trading access upon launch.
- **Partner & Ecosystem - 888,889 (20%)** Strategic partnership development and ecosystem growth initiatives including platform integrations and business development activities.
- **Team - 444,444 (10%)** Core contributor allocation with 12-month cliff period and 48-month linear vesting schedule to ensure long-term commitment.

Vesting Schedule

- **Community Allocation (50%):** 100% unlocked at Token Generation Event for immediate claiming once earned through mining and other activities when using iFlux Global ecosystem. Users can continue mining the remaining tokens and claim them at any time after listing. Token will be listed when community has collectively earned 444,444 tokens (10% of total supply - 20% of Community Allocation) through mining activities.
- **DEX Liquidity (20%):** 100% unlocked at TGE to provide immediate trading liquidity.
- **Partner & Ecosystem (20%):** 12-month cliff followed by 48-month linear vesting.
- **Team (10%):** 12-month cliff followed by 48-month linear vesting.

Listing Trigger

When the community collectively mines 444,444 tokens (10% of total supply, equivalent to 20% of community allocation), $IFLUX will be listed on decentralized exchanges. The remaining 40% of total supply continues to be distributed through ongoing mining activities.

Deflationary Mechanisms

$IFLUX implements multiple deflationary mechanisms to create long-term value appreciation:

- **Platform Fee Burning:** All interest payments from Token Installment contracts are permanently burned, removing tokens from circulation as platform usage grows.

- **Swap Fee Burning:** 1% fees from all swap transactions are automatically burned.
- **Penalty Fee Burning:** Late payment penalties and liquidation fees are permanently removed from circulation.
- **No Additional Minting:** The fixed supply ensures no inflation through additional token creation.

$IFLUX Utilities

$IFLUX serves as the cornerstone of the iFlux Global ecosystem, providing comprehensive utility across all platform activities and services.

Reward System

Every activity on iFlux Global is rewarded with $IFLUX token incentives:

- **Token Installment Participation:** Both live and demo installment contracts generate token rewards, encouraging users to engage with the platform's core financial services.
- **DePIN Mining Rewards:** Users earn $IFLUX through the soft DePIN feature via browser extension usage, data contribution, and network participation.
- **Task Center Completion:** Bonus tasks and daily activities provide additional token earning opportunities for active community members.
- **Referral Program:** Invite friends and earn percentage-based rewards from their platform activities, creating sustainable growth incentives.
- **Daily Check-in:** Consistent platform engagement through daily check-ins generates regular token rewards for loyal users.

Deflationary Mechanisms

$IFLUX implements multiple anti-inflation mechanisms to ensure long-term value appreciation:

- **Interest and Penalty Burning:** Interest payments and penalties from installment contracts are sent to burn addresses, permanently eliminating tokens from circulating supply.
- **Swap Fee Burning:** 1% fees from all swap transactions are automatically burned, creating deflationary pressure through trading activity.
- **No Minting Policy:** Zero additional token creation ensures no inflation through supply expansion, maintaining scarcity as the platform grows.

Decentralized Governance (DAO)

$IFLUX holders possess voting rights to participate in platform governance decisions:

- **Interest Rate Adjustments:** Vote on installment contract interest rates to balance platform sustainability with user benefits.
- **Fee Structure Modifications:** Determine swap fees, penalty rates, and other platform charges through community consensus.

- **Token Burn Schedule:** Decide on burn frequency and mechanisms to optimize deflationary effects.
- **Listing Timeline:** Participate in decisions regarding token exchange listings and market expansion.
- **Platform Benefits:** Vote on all matters relating to $IFLUX holder advantages and ecosystem improvements.

DeFi Integration

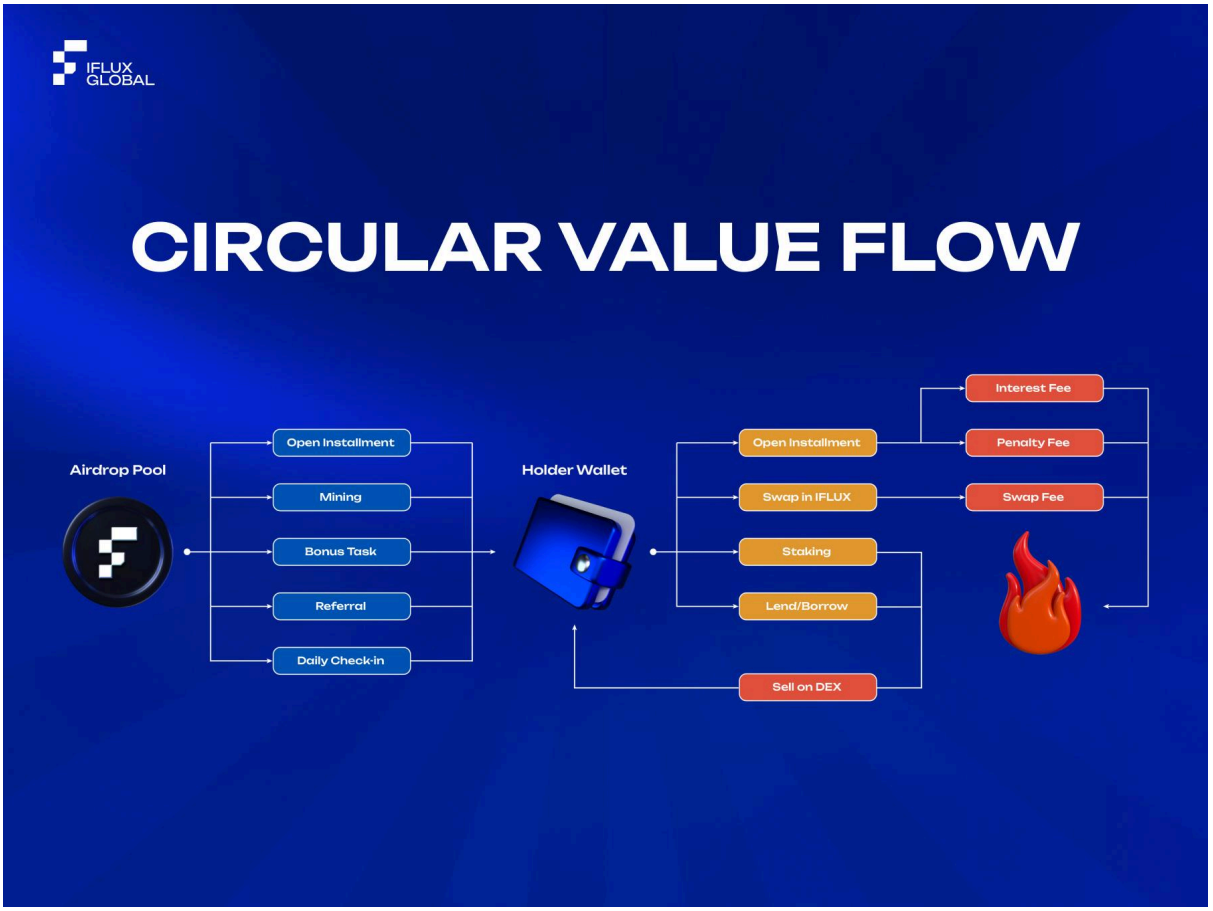

$IFLUX provides extensive DeFi utility for advanced users:

- **Liquidity Staking:** Hodlers can farm $IFLUX on-chain as liquidity providers to gain additional $IFLUX rewards through automated market maker protocols.
- **Liquidity Lending:** Participate in lending protocols to lend $IFLUX for borrowing other cryptocurrencies, or borrow against $IFLUX holdings for leveraged positions.

Partnership Benefits

$IFLUX holders enjoy exclusive advantages through ecosystem partnerships:

- **Special Discounts:** Access preferential rates and exclusive benefits through partnerships with other projects within the iFlux ecosystem.
- **Cross-Platform Utility:** Use $IFLUX across partner platforms for enhanced functionality and reduced fees.
- **Ecosystem Expansion:** Benefit from growing partnership network that increases token utility and value.

How-to-Guide

Set up iFlux Global Mining Node

iFlux Global Mining Node lets you easily contribute your browsing data to help build AI protection systems for the crypto community. The network uses consensual data sharing to train AI models that will detect scams and protect users, rewarding you with $IFLUX tokens in return. Simply set it up once, and the mining node handles the rest - you can pause participation anytime.

The network does not access your computer or view your private activities. All iFlux Global Mining Node does is collect anonymized browsing patterns that you explicitly choose to share, which is completely separate from your personal data. That means zero access to your private information, messages, or financial details.

Steps to start mining $IFLUX

Step 1: Sign up at iflux.global with an email address or Google account and turn on 2FA.

Step 2: Download the iFlux Global Mining Node Chrome extension from the Chrome Web Store or simply click **[here]**.

Step 3: Install the extension and accept the consensual data sharing agreement - this automatically creates your first mining node.

Step 4: That's it! You'll be able to view your mining status and watch the $IFLUX tokens accumulate. Sit back and relax!

The iFlux Global Mining Node will run in the background while you get rewarded for your consensual data contribution.

IFLUX GLOBAL

START MINING $IFLUX IN 4 EASY STEPS

Step 1: Sign Up

Sign up at iflux.global with email or Google account

Enable 2FA for security

Step 2: Download Mining Nodes Extension

Download iFlux Global Mining Node from Chrome Web Store

Click the download button below

Step 3: Install & Accept

Install Extension And Accept Data Sharing Agreement

Your first mining node is automatically created

Step 4: Start Mining

Watch Your $IFLUX Tokens Grow!

Mining runs in background - sit back and relax

Add Multiple Mining Nodes

How to Connect Additional Devices

Expanding your mining network to multiple devices maximizes your earning potential while contributing more valuable data to the AI training process.

Multi-Device Setup Process:

1. **Access Dashboard from New Device**: Log into your iFlux Global account at iflux.global from any additional device (laptop, desktop, etc.)
2. **Navigate to the DePIN Section**: Go to your DePIN dashboard.
3. **Click "Add Node"**: You'll see the option to connect a new device to your mining network
4. **Install Chrome Extension**: Click the "Chrome Extension Node" button, which will redirect you to the Chrome Web Store
5. **Complete Extension Setup**: Download, install, and activate the extension on the new device using your existing account credentials
6. **Automatic Node Registration**: Once activated, the new device appears in your dashboard as an additional mining node

Important Notes:

- Each device requires its own Chrome extension installation
- All devices must use the same iFlux Global account for unified reward tracking
- Each device needs a unique IP address for anti-cheat compliance
- You can add unlimited nodes across different devices and locations, as long as each device has a different IP address.

IFLUX GLOBAL

ADD MORE DEVICES FOR HIGHER REWARDS

Connect Unlimited Devices To Boost Your Mining Power

Step 1: Access From New Device

Log Into Iflux.Global From Any Additional Device

Step 2: Enter DePIN Dashboard

Navigate To Your DePIN Dashboard

Step 3: Click 'Add Node' Button

Click 'Add Node' To Connect New Device

Mining Rewards and Earnings

How to Earn $IFLUX Tokens

Earning $IFLUX tokens happens through multiple integrated methods within the iFlux ecosystem:

Note: $IFLUX tokens accumulate in your account balance and must be manually claimed to transfer them to your connected wallet. There are no automatic transfers - you control when to claim your earned rewards.

1. Mining Through Browser Extension

Earn tokens by running the Chrome extension and maintaining your network connection across multiple devices.

Dynamic Mining Reward Calculation:

```
Base Mining Rate = (Daily Token Allocation × Network Efficiency Factor) ÷ Active Node Count
```

In which:

```
Network Efficiency Factor = f(Geographic Distribution, Node Uptime, Data Quality Score)

Where:

- Geographic Distribution Multiplier = 0.8-1.2 based on regional participation balance

- Node Uptime Coefficient = (Individual Uptime ÷ Network Average Uptime)^0.7

- Data Quality Score = Weighted average of contribution accuracy, freshness, and uniqueness
```

```
Final Hourly Reward = Base Mining Rate × Personal Efficiency Score × Time-Weighted Contribution Factor

Personal Efficiency Score incorporates:

- Consistent participation patterns (anti-gaming mechanism)

- Data contribution diversity across multiple categories

- Network stability contribution through sustained uptime

- Community engagement through task completion rates
```

2. Referral Network Building

Primary Referrals: After setting up mining, you'll receive a referral link to invite others. Each successful referral increases your mining rewards by **5% of your direct referral's mining earnings**.

Single-Level Commission Structure:

- **Direct Referrals Only**: 5% of your direct referral's mining rewards
- **No Multi-Level**: You only earn from people you directly invite

For example,

User A invites User B:

- User B mines 100 $IFLUX → User A receives 5 $IFLUX (5% commission)

User B invites User C:

- User C mines 80 $IFLUX → User B receives 4 $IFLUX (5% commission)

- User A receives none from User C (single-level only)

Result:

- User A: Only earns from B (direct referral)

- User B: Only earns from C (direct referral)

- No multi-level cascade or pyramid structure

Why Single-Level Structure?

- **Avoid MLM schemes**: Prevents pyramid-like referral structures that can become unsustainable
- **Focus on quality referrals**: Encourages users to invite genuinely active participants rather than building large inactive networks
- **Sustainable economics**: Total referral cost remains at 5% instead of compounding multi-level percentages
- **Simpler tracking**: Easier to understand, manage, and audit referral relationships
- **Fair distribution**: Rewards go directly to the person who made the effort to bring new users
- **Regulatory compliance**: Single-level referrals are more compliant with financial regulations across jurisdictions

This structure maintains incentives for network growth while ensuring long-term sustainability and fairness.

3. Enhanced Contributor Recognition System

Advanced Tier Structure (In Development)

We're developing a comprehensive contributor classification system that will recognize and reward different levels of ecosystem participation. This multi-tiered approach will evaluate various contribution metrics including mining consistency, platform engagement, and community building activities.

The recognition framework will incorporate:

- Mining performance and consistency metrics
- Cross-platform ecosystem participation
- Community contribution scores
- Long-term commitment indicators

Specific tier requirements, multiplier benefits, and qualification criteria are currently being finalized based on network performance data and community feedback. Enhanced rewards and benefits will be available to contributors who demonstrate sustained platform engagement.

Updates will be announced through our official channels as development progresses.

4. Task and Engagement Rewards

Daily Activities: Complete simple tasks for bonus $IFLUX rewards:

- **Daily Check-in**: 1-5 $IFLUX based on streak length (7-day maximum)
- **Social Tasks**: Follow, share, and engage for 1-2 $IFLUX per activity
- **Community Participation**: Join discussions and events for bonus allocations
- **Platform Usage (Bonus Tasks)**: Use other features in the iFlux Global ecosystem for bonus rewards

Token Claiming Process

How to Claim Your $IFLUX Rewards

Wallet Connection Setup:

1. **Connect Your Wallet**: Go to Profile -> Settings -> Wallet Address and click "Connect Wallet"
2. **Choose Wallet Type**: Select MetaMask or Trust Wallet from the available options
3. **Add BSC Network**: In case Binance Smart Chain isn't visible, please add this network to your wallet by navigating to the network dropdown, and select "Add Network". Then, enter the following details
    - Network Name: Binance Smart Chain
    - RPC URL: https://bsc-dataseed.binance.org/
    - Chain ID: 56
    - Symbol: BNB
    - Block Explorer: https://bscscan.com
4. After entering this information, click "Save" to add the BSC network
5. **Add $IFLUX Token**: Import token contract address to make $IFLUX visible in your wallet (address will be provided at launch)

Claiming Your Earned Tokens:

1. Navigate to your dashboard to view your total accumulated $IFLUX balance

2. Click the "Claim" button to initiate the withdrawal process. Make sure you have enough BNB for the gas fee.
3. Confirm the transaction in your connected wallet (MetaMask/Trust Wallet)
4. Tokens will be transferred to your wallet within 5-10 minutes of successful confirmation
5. You can claim any amount at any time - there are no minimum thresholds.

Important Claiming Notes:

- Tokens remain in your dashboard balance until you manually claim them
- You control when to claim - tokens do not transfer automatically
- No expiration date on unclaimed tokens - they remain in your account indefinitely
- Each claim requires a wallet transaction confirmation
- Gas fees for claiming are minimal on BSC network

IFLUX GLOBAL

CLAIM YOUR $IFLUX REWARDS

Step 1: Check Your Balance

View Your
Total Accumulated
$IFLUX Balance

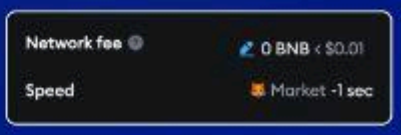

Navigate To
Your Mining Dashboard

Step 2: Start Claiming Tokens

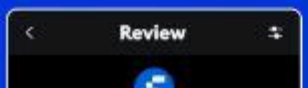

Click 'Claim'
To Start Withdrawal"

Ensure you have enough BNB for gas fees

Step 3: Click Confirm

Important Notes to Remember

Mining Requirements

- **Internet Connection**: Stable internet required for consistent mining rewards
- **Browser Activity**: Extension works best when browser is actively used
- **Account Security**: Enable 2FA and secure your wallet connection
- **Device Limits**: One node per IP address to maintain fair distribution

Reward Optimization

- **Consistent Usage**: Regular daily browsing provides better rewards than sporadic usage
- **Multiple Devices**: Add nodes on different devices/locations for increased earnings
- **Platform Integration**: Active participation in iFlux ecosystem enhances overall rewards
- **Community Engagement**: Complete tasks and maintain referral network for bonus rewards

Technical Considerations

- **Extension Updates**: Keep Chrome extension updated for optimal performance
- **Wallet Connection**: Ensure wallet remains connected for reward tracking
- **Privacy Settings**: Extension respects browser privacy settings and ad blockers
- **Performance Impact**: Minimal system resource usage - no noticeable slowdown

Advanced Network Dynamics

- **Mining Difficulty**: Automatically adjusts based on total network participation and token circulation patterns
- **Anti-Gaming Mechanisms**: Behavioral pattern analysis using machine learning algorithms prevents exploitation
- **Geographic Distribution**: Cross-referenced participation validation ensures fair global representation
- **Quality Assurance**: Temporal consistency scoring maintains data contribution standards

The iFlux Global Mining Node provides the simplest entry point into DePIN participation while offering multiple earning opportunities through platform integration. Start with basic setup and gradually expand your mining network as you become familiar with the system.

Architecture

Overview

iFlux Global Mining Node represents the first **Consensual Data Intelligence Network** designed specifically for crypto community protection. Unlike traditional surveillance

capitalism that extracts data without consent, or DePIN projects that favor insiders over contributors, our architecture prioritizes user consent and fair rewards.

The system transforms simple browser-based data collection into a foundation for future AI development that will serve the crypto community rather than exploit it, staying true to our "Earn What You Give" philosophy.

Core Architecture Components

Chrome Extension Mining Nodes

Overview Chrome Extension Nodes serve as the primary data collection layer, operating as lightweight browser-integrated clients that gather consensual browsing intelligence. Each node functions autonomously while contributing to collective datasets that will eventually power community protection systems.

Node Operation Process

1. **Data Collection**: Anonymized browsing patterns focusing on sites you visit, news mentions you see, trending projects, and potential security threats
2. **Local Processing**: Simple data filtering and quality checks happen on your device first
3. **Secure Transmission**: Encrypted data submission to our processing network
4. **Reward Calculation**: Real-time contribution scoring and $IFLUX accumulation in your dashboard

What We Collect (With Your Consent)

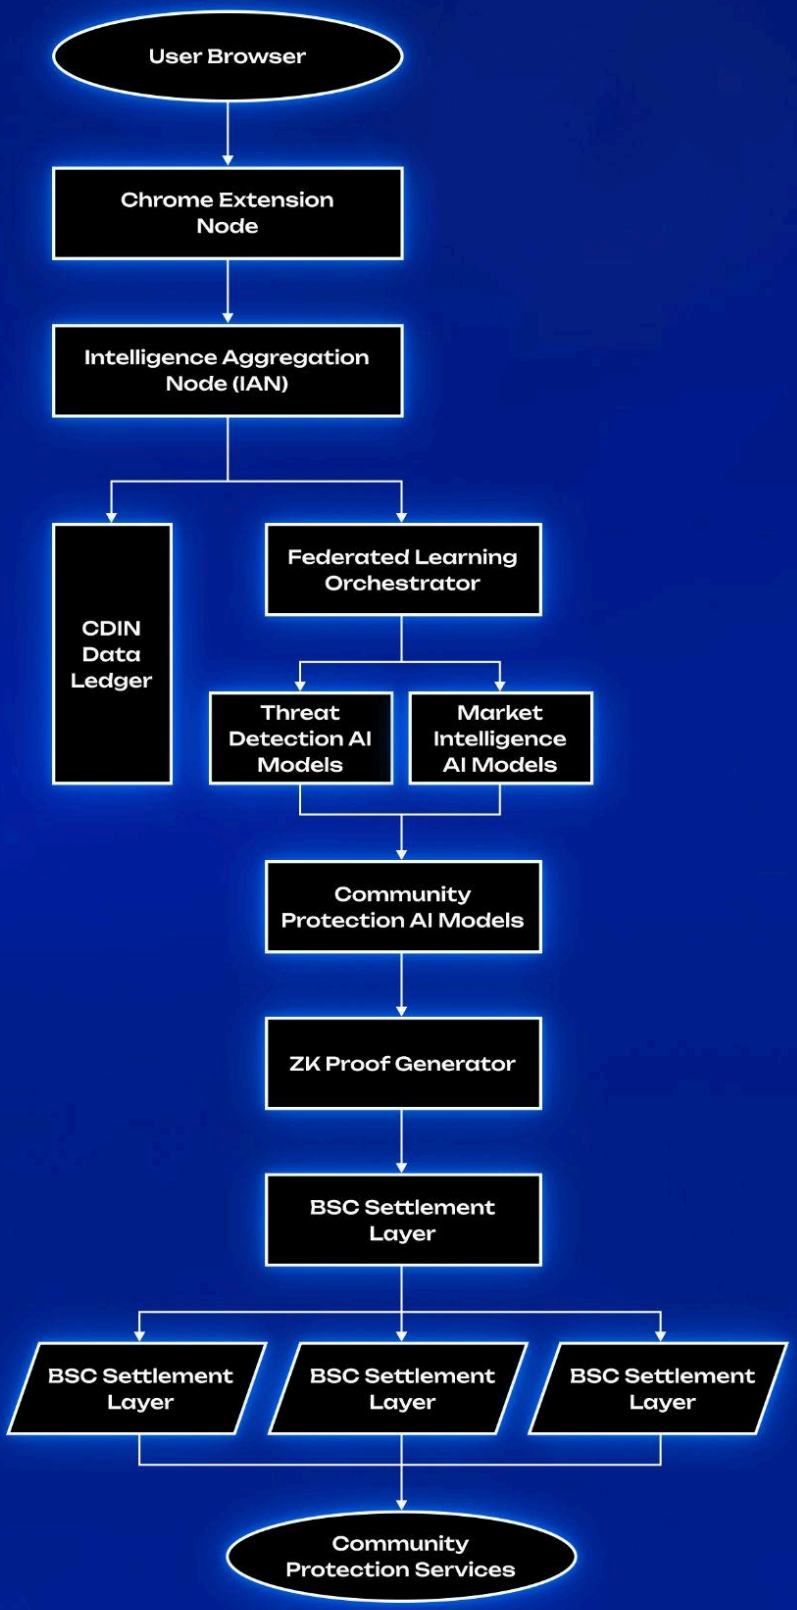

- **Website Safety Data**: URLs of sites visited to help identify scam sites and phishing attempts
- **Market Trend Information**: Anonymized browsing patterns showing emerging crypto opportunities and trending projects
- **Community Threat Intelligence**: Patterns that help protect other users from fraud and malicious sites
- **We DO NOT Collect**: Personal messages, passwords, financial details, or any private information

Multi-Device Architecture

- **Unlimited Node Deployment**: Users can operate nodes across multiple devices and locations
- **Geographic Distribution Bonuses**: Enhanced rewards for underrepresented regions (0.8x-1.2x multiplier)
- **Unified Reward Tracking**: Cross-device synchronization for consolidated earnings
- **Anti-Cheat Protection**: One node per IP address with behavioral pattern monitoring

IFLUX GLOBAL

iFlux Platform Data Flow

Data Processing and Intelligence Layer

Data Aggregation System Our processing network receives and validates browsing data from distributed Chrome Extension Nodes. The system implements quality controls to ensure data integrity and prevent network manipulation while preparing datasets for future AI training.

Quality Assessment Protocol

```
Data Quality Evaluation Framework:

Authenticity Verification:
- Human vs. bot traffic detection using behavioral analysis
- Device fingerprinting consistency checks
- Geographic location stability monitoring

Relevance Scoring:
- Crypto-related content identification and categorization
- Security threat pattern recognition and classification
- Market sentiment indicators and trend analysis

Freshness Validation:
- Real-time data collection vs. cached content detection
- Content recency verification against publication timestamps
- Market timing relevance for trading intelligence applications
```

Future AI Training Pipeline

AI Development Roadmap The data collected today builds the foundation for AI models that will protect the crypto community tomorrow. Our training pipeline focuses on community benefit rather than corporate surveillance, with all models designed to serve users directly.

Planned AI Applications (Future Deployment)

- **Threat Detection Models:** Real-time scam identification, phishing warnings, and rug pull alerts directly in your browser
- **Market Intelligence Models:** Sentiment analysis, trend prediction, and trading insights based on collective community data
- **Community Protection Models:** Coordinated attack recognition and manipulation detection across platforms

Training Approach

Development Philosophy:
- Privacy-First: Individual user data cannot be reconstructed from trained models
- Community-Owned: AI serves users, not corporations trying to manipulate behavior
- Transparent: Regular updates on AI development progress and capabilities
- Optional: Users control participation levels and can opt-out at any time

Expected Timeline:
- Q3 2025: Data collection and initial training datasets
- …: First threat detection features beta testing
- …: Market intelligence tools for community testing
- ..: Full AI protection suite deployment

Node Reputation and Scoring System

Reward Calculation Architecture

Your $IFLUX earnings are determined through our sophisticated multi-factor algorithm that ensures fair compensation for quality contributions. The system balances individual performance with network-wide efficiency to maintain sustainable token distribution.

For detailed reward calculation formulas and optimization strategies, see our **How-to-Guide** section.

The reward system ensures fair compensation through:

- **Anti-gaming mechanisms** to prevent exploitation and bot farming
- **Quality-based scoring** to reward valuable data contributions over quantity
- **Geographic balancing** to encourage global participation and prevent concentration
- **Platform integration bonuses** for users actively engaging with the broader iFlux ecosystem

Reputation Scoring Framework

Authenticity Score (30% Weight)

Authenticity = (Human Traffic Patterns × 0.4) + (Behavioral Consistency × 0.3) + (Device Verification × 0.3)

What This Means:

- Reward for genuine browsing vs. automated farming attempts

- Bonus for consistent daily usage patterns over time

- Protection against bot networks and fake traffic generation

Relevance Score (25% Weight)

Relevance = (Crypto Content Engagement × 0.35) + (Security Threat Detection × 0.40) + (Market Data Value × 0.25)

What This Measures:

- Quality of crypto-related browsing that helps train AI models
- Your contribution to identifying scams and malicious sites
- Value of market sentiment and trend data you provide

Data Freshness Score (25% Weight)

Freshness = (Real-time Collection × 0.5) + (Content Recency × 0.3) + (Market Timing × 0.2)

Rewards You For:

- Live browsing data vs. cached or delayed submissions
- Accessing current content relevant to market conditions
- Timely data collection during important market events

Network Availability Score (20% Weight)

Availability = (Uptime Consistency × 0.4) + (Response Quality × 0.3) + (Geographic Stability × 0.3)

Measures Your:

- Consistent online presence and mining participation
- Fast, reliable data submission without technical issues
- Stable location to prevent manipulation attempts

Enhanced Contributor Recognition System (In Development)

We're developing a comprehensive contributor classification system that will recognize and reward different levels of ecosystem participation. This multi-tiered approach will evaluate various contribution metrics including mining consistency, platform engagement, and community building activities.

The recognition framework will incorporate:

- Mining performance and consistency metrics
- Cross-platform ecosystem participation (Token Installments, Daily Earn, Swaps)
- Community contribution scores through referrals and engagement
- Long-term commitment indicators and platform loyalty

Specific tier requirements, multiplier benefits, and qualification criteria are currently being finalized based on network performance data and community feedback. Enhanced rewards will be available to contributors who demonstrate sustained platform engagement across multiple iFlux services.

Updates will be announced later as development progresses.

Reward Distribution Architecture

Token Distribution and Economic Model

Distribution Framework Our reward distribution system allocates tokens from the community mining pool (50% of total $IFLUX supply = 2,222,222 tokens) through automated smart contracts that ensure transparent and fair distribution based on verified contributions.

Economic Sustainability Design

- **Revenue-Backed Distribution**: Mining rewards are supported by actual platform revenue rather than speculative funding
- **Deflationary Mechanisms**: Platform fees from installments, penalties, and swap transactions are burned to maintain token value
- **Community-First Allocation**: 70% of tokens available immediately at launch for community claiming and use
- **Long-term Viability**: Token distribution rate adjusts based on network growth and platform adoption

Platform Integration Benefits

- **Token Installment Integration**: Enhanced mining rates for users with active installment contracts
- **Daily Earn Synergy**: Bonus multipliers for participants staking mined tokens in Daily Earn
- **Referral Network Rewards**: 5% commission structure across multiple referral levels
- **Community Engagement Bonuses**: Additional rewards for task completion and social participation

Anti-Gaming Protection Systems

Network Integrity Framework Our protection systems use advanced behavioral analysis and pattern recognition to maintain network quality and prevent manipulation attempts. The system focuses on education and graduated responses rather than harsh penalties.

Multi-Layer Detection Approach

- **Behavioral Analysis**: Machine learning algorithms identify unnatural usage patterns and bot-like behavior
- **Geographic Validation**: Advanced location verification prevents VPN manipulation and location spoofing

- **Device Authentication**: Hardware fingerprinting ensures legitimate device participation
- **Social Graph Analysis**: Network analysis detects coordinated manipulation attempts and farming operations

Fair Enforcement Philosophy

- **Educational First**: Warning systems help users understand and correct compliance issues
- **Graduated Responses**: Temporary reward adjustments rather than permanent account bans
- **Transparent Process**: Clear explanation of penalty reasons and recovery procedures
- **Community Governance**: Democratic oversight of enforcement policies and appeal processes

For specific fraud detection metrics and penalty structures, refer to our **How-to-Guide** documentation.

Security and Privacy Framework

Your Privacy is Our Priority

What We Protect

- **Zero Personal Data Access**: No passwords, private messages, or financial information
- **Anonymized Collection**: All browsing data is stripped of personal identifiers
- **Local Control**: You choose exactly what data categories to share
- **Transparent Process**: Clear explanation of all data collection and usage

Technical Privacy Protection

Multi-Layer Privacy Architecture:
1. Browser-Level: Secure local data processing before any transmission
2. Transmission: Military-grade encryption for all network communications
3. Processing: Advanced techniques ensure individual activities cannot be reconstructed
4. Storage: Zero-knowledge systems for transparency without privacy compromise

Network Security and Reliability

Protecting Your Participation

- **Distributed Design**: No single points of failure that could compromise the network
- **Geographic Redundancy**: Multiple validation systems across global regions
- **Autonomous Operation**: Your mining continues even during system maintenance
- **Community Governance**: Democratic control over security policies and upgrades

Emergency Response Systems

- **Threat Detection**: Automatic protection during coordinated attacks on the network
- **Service Continuity**: Backup systems maintain operation during technical issues
- **Community Alerts**: Real-time notifications for important security updates
- **Transparent Communication**: Regular updates on network status and improvements

Integration with iFlux Ecosystem

How Mining Connects to Your iFlux Experience

Immediate Token Utility

- **Installment Down Payments**: Use mined $IFLUX tokens for crypto purchase down payments
- **Daily Earn Participation**: Stake earned tokens for 12% APR passive income
- **Platform Fee Discounts**: Reduced transaction costs across all iFlux services
- **Governance Rights**: Vote on platform policies and development priorities

Future AI Benefits for Platform Users

- **Enhanced Trading**: AI insights will improve installment timing and market analysis
- **Security Protection**: Real-time scam alerts will protect users during swaps and transactions
- **Community Intelligence**: Collective threat detection will benefit all platform participants
- **Market Advantages**: Better information will lead to improved investment decisions

Ecosystem Growth and Development

Planned Expansions

- **Mobile Integration**: Browser extension functionality for mobile devices
- **Cross-Platform API**: Third-party access to community protection features
- **Partnership Integrations**: Collaboration with other DeFi protocols for broader protection
- **Educational Resources**: AI-powered learning tools for crypto safety and trading

Community-Driven Evolution

- **Governance Proposals**: Community voting on all major feature developments
- **Open Feedback**: Regular surveys and discussions about platform improvements
- **Transparent Roadmap**: Clear communication about development priorities and timelines
- **User-Centric Design**: All features developed based on actual community needs and feedback

The iFlux Global Mining Node architecture embodies our core principle of "Earn What You Give" - providing immediate, fair compensation for valuable data contributions while building the foundation for AI systems that will protect and empower the entire crypto community. Unlike traditional surveillance models that extract value from users, our system ensures that those who contribute to network security and intelligence are the primary beneficiaries of the value created.

Roadmap

Q3 2025 - Phase 1: Launch

- Launch Chrome Extension Mining Node with multi-device support
- Activate Task Center and single-level referral program
- Users begin earning $IFLUX through consensual data contribution

Q4 2025 - Phase 2: Expansion

- Launch Daily Earn (12% APR) for $IFLUX holders
- DEX listing after 10% of tokens mined
- Expand utility through ecosystem partnerships

2026 - Phase 3: DeFi Integration

- Introduce $IFLUX staking, lending, and liquidity features
- Launch Token Installment compatibility with $IFLUX
- Deploy governance voting for community decision-making

Late 2026 - 2027 - Phase 4: AI Features

- Launch scam detection and market insight tools
- Deploy AI models trained on community data for real-time protection

2027+ - Phase 5: Future

- Launch mobile mining applications
- Open API for third-party integration
- Complete transition to full DAO governance

Each phase builds upon proven foundations while expanding utility and community value through measured, strategic development.

PRIVACY AND TERMS

Privacy and Cookie Policy

This Privacy Policy describes Our policies and procedures on the collection, use and disclosure of Your information when You use the Service and tells You about Your privacy rights and how the law protects You.

We use Your Personal data to provide and improve the Service. By using the Service, You agree to the collection and use of information in accordance with this Privacy Policy. This Privacy Policy has been created with the help of the Privacy Policy Generator.

Interpretation and Definitions

Interpretation The words of which the initial letter is capitalized have meanings defined under the following conditions. The following definitions shall have the same meaning regardless of whether they are written in singular or plural.

Definitions For the purposes of this Privacy Policy:

- **Company** (referred to as either "the Company", "We", "Us" or "Our" in this Agreement) refers to iFlux Global
- **Cookies** are small files placed on Your computer, mobile device, or any other device by a website, containing the details of Your browsing history on that website among its many uses.
- **Device** means any device that can access the Service such as a computer, a cellphone, or a digital tablet.
- **Personal Data** is any information that relates to an identified or identifiable individual.
- **Service** refers to the Website and Mining Node extension.
- **Mining Node** refers to the Chrome extension and associated data collection service for earning $IFLUX tokens.
- **Consensual Data** means browsing data you explicitly agree to share through the mining extension.
- **Service Provider** means any natural or legal person who processes the data on behalf of the Company.
- **Third-party Service** refers to any website or any social network website through which a User can log in or create an account to use the Service.
- **Usage Data** refers to data collected automatically, either generated by the use of the Service or from the Service infrastructure itself.
- **Website** refers to iFlux Global, accessible from iflux.global
- **You** means the individual accessing or using the Service, or the company, or other legal entity on behalf of which such individual is accessing or using the Service, as applicable.

Collecting and Using Your Personal Data

Types of Data Collected

Personal Data While using Our Service, We may ask You to provide Us with certain personally identifiable information that can be used to contact or identify You. Personally identifiable information may include, but is not limited to:

- Phone number
- Usage Data

Mining Node Browsing Data (With Explicit Consent) While using the iFlux Global Mining Node extension, We collect the following data only with your explicit consent:

- Website URLs and domains visited to identify potential security threats and market trends
- Time spent on crypto-related websites for market sentiment analysis
- Anonymized browsing patterns that help detect scam sites and phishing attempts
- Geographic location data for network distribution optimization
- Node performance metrics including uptime and data quality for reward calculation

We specifically DO NOT collect:

- Personal messages, emails, or private communications
- Passwords, private keys, or financial account details
- Personal identification information or sensitive personal data
- Any data from websites you explicitly exclude from collection

Usage Data is collected automatically when using the Service.

Usage Data may include information such as Your Device's Internet Protocol address (e.g. IP address), browser type, browser version, the pages of our Service that You visit, the time and date of Your visit, the time spent on those pages, unique device identifiers and other diagnostic data.

When You access the Service by or through a mobile device, We may collect certain information automatically, including, but not limited to, the type of mobile device You use, Your mobile device's unique ID, the IP address of Your mobile device, Your mobile operating system, the type of mobile Internet browser You use, unique device identifiers and other diagnostic data.

We may also collect information that Your browser sends whenever You visit our Service or when You access the Service by or through a mobile device.

Tracking Technologies and Cookies We use Cookies and similar tracking technologies to track the activity on Our Service and store certain information. Tracking technologies are beacons, tags, and scripts to collect and track information and improve and analyze Our Service. The technologies We use may include:

- Cookies or Browser Cookies.
- Flash Cookies.
- Web Beacons.

Cookies can be "Persistent" or "Session" Cookies. Persistent Cookies remain on Your personal computer or mobile device when You go offline, while Session Cookies are deleted as soon as You close Your web browser.

We use both Session and Persistent Cookies for the purposes set out below:

- Necessary / Essential Cookies
- Cookies Policy / Notice Acceptance Cookies
- Functionality Cookies

Use of Your Personal Data The Company may use Personal Data for the following purposes:

- To provide and maintain our Service, including monitoring the usage of our Service.
- For the performance of a contract: the development, compliance, and undertaking of the purchase contract for the products, items, or services You have purchased or of any other contract with Us through the Service.
- To contact You: To contact You by email, telephone calls, SMS, or other equivalent forms of electronic communication, such as a mobile application's push notifications regarding updates or informative communications related to the functionalities, products or contracted services, including the security updates, when necessary or reasonable for their implementation.
- To provide You with news, special offers and general information about other goods, services and events which we offer that are similar to those that you have already purchased or enquired about unless You have opted not to receive such information.
- To manage Your requests: To attend and manage Your requests to Us.
- **For Mining Node Operations**: To calculate mining rewards based on data quality and contribution metrics, train AI models for future community protection features including scam detection and market analysis, improve network security through collective threat intelligence, and develop market insights for the crypto community using privacy-preserving techniques.

Data Processing for AI Training Your consensual browsing data is processed using privacy-preserving techniques:

- All data is anonymized and stripped of personal identifiers before processing
- Individual user activities cannot be reconstructed from AI training datasets
- Differential privacy techniques ensure your privacy while enabling effective AI development
- Data aggregation occurs across millions of users to prevent individual identification

Retention of Your Personal Data The Company will retain Your Personal Data only for as long as is necessary for the purposes set out in this Privacy Policy. We will retain and use Your Personal Data to the extent necessary to comply with our legal obligations, resolve disputes, and enforce our legal agreements and policies.

Mining Node Data Retention:

- Anonymized browsing data: Retained indefinitely for AI training purposes

- Personal mining metrics: Retained for the duration of your account activity
- Reward calculation data: Retained permanently for audit and transparency purposes
- Raw browsing data: Processed and anonymized within 30 days of collection

The Company will also retain Usage Data for internal analysis purposes. Usage Data is generally retained for a shorter period of time, except when this data is used to strengthen the security or to improve the functionality of Our Service, or We are legally obligated to retain this data for longer time periods.

Disclosure of Your Personal Data

Third-Party AI Training We may share anonymized, aggregated data with trusted research partners for AI development purposes. No individual user data or personally identifiable information is shared with third parties.

Law enforcement Under certain circumstances, the Company may be required to disclose Your Personal Data if required to do so by law or in response to valid requests by public authorities (e.g. a court or a government agency).

Other legal requirements The Company may disclose Your Personal Data in the good faith belief that such action is necessary to:

- Comply with a legal obligation
- Protect and defend the rights or property of the Company
- Prevent or investigate possible wrongdoing in connection with the Service
- Protect the personal safety of Users of the Service or the public
- Protect against legal liability

Security of Your Personal Data The security of Your Personal Data is important to Us.

We do not use vulnerability scanning and/or scanning to PCI standards. We use regular Malware Scanning. Your personal information is contained behind secured networks and is only accessible by a limited number of persons who have special access rights to such systems and are required to keep the information confidential. All sensitive/credit information you supply is encrypted via Secure Socket Layer (SSL) technology.

Mining Node Security Measures:

- Multi-layer privacy architecture with browser-level secure data processing
- Military-grade encryption for all network communications
- Advanced techniques ensure individual activities cannot be reconstructed
- Zero-knowledge systems for transparency without privacy compromise

Links to Other Websites Our Service may contain links to other websites that are not operated by Us. If You click on a third-party link, You will be directed to that third-party's site. We strongly advise You to review the Privacy Policy of every site You visit.

We have no control over and assume no responsibility for the content, privacy policies, or practices of any third-party sites or services.

Changes to this Privacy Policy We may update Our Privacy Policy from time to time. We will notify You of any changes by posting the new Privacy Policy on this page.

We will let You know via email and/or a prominent notice on Our Service, prior to the change becoming effective and update the "Last updated" date at the top of this Privacy Policy.

You are advised to review this Privacy Policy periodically for any changes. Changes to this Privacy Policy are effective when they are posted on this page.

Contact Us If you have any questions about this Privacy Policy, You can contact us:

- By email: support@iflux.global

Terms and Conditions

Terms and Conditions for iFlux Global Please read these terms and conditions carefully before using Our Service.

Interpretation and Definitions

Interpretation The words of which the initial letter is capitalized have meanings defined under the following conditions. The following definitions shall have the same meaning regardless of whether they are written in singular or plural.

Definitions For the purposes of these Terms and Conditions:

- **Company** (referred to as either "the Company", "We", "Us" or "Our" in this Agreement) refers to iFlux Global
- **Device** means any device that can access the Service such as a computer, a cellphone, or a digital tablet.
- **Service** refers to the Website and Mining Node extension.
- **Terms and Conditions** (also referred to as "Terms") are the terms and conditions that form the entire agreement between You and the Company regarding the use of the Service.
- **Third-party Service** means any services or content provided by a third party that may be displayed, included, or made available by the Service.
- **Website** refers to iFlux Global, accessible from iflux.global
- **Interest** means the indicated interest rate accrued in accordance with these Terms and subject to revision at any time.
- **Intellectual Property** refers to all philosophical and industrial property rights, belonging to iFlux Global.
- **Tokens** means any tokens (such as cryptocurrencies, stablecoins, and tokenized assets), accepted by iFlux Global.
- **You or Client** refers to the individual accessing or using the Service.
- **Installment** refers to any Tokens installment plan that iFlux Global grants.
- **Mining Node** refers to the Chrome extension and associated data collection service for earning $IFLUX tokens.

- **Mining Rewards** refers to $IFLUX tokens earned through consensual data contribution and network participation.
- **Consensual Data** means browsing data you explicitly agree to share through the mining extension.
- **Node Operator** means any user running the iFlux Global Mining Node extension.

Acknowledgment

The following are the Terms and Conditions governing the use of this Service and the agreement that operates between You and the Company.

Your access to and use of the Service is conditioned on Your acceptance of and compliance with these Terms and Conditions. These Terms and Conditions apply to all visitors, users, and others who access or use the Service.

You accept these Terms and Conditions by using the Service or by accessing it. If You disagree with any part of these Terms and Conditions then You may not access the Service.

You represent that you are over the age of 18. The Company does not permit those under 18 to use the Service.

You are not a citizen or resident of a sanctioned country according to the up-to-date lists of the US Office of Foreign Assets Control (OFAC), the United Nations, the European Union and any EU Member State, the UK Treasury, etc.

Your access to and use of the Service is also conditioned on Your acceptance of and compliance with the Privacy Policy of the Company.

By entering into this Agreement, you acknowledge and confirm that you meet all the conditions set out above. If we subsequently ascertain that you have not met or do not meet any of these conditions anymore, we may suspend the provision of the iFlux Global services to you.

You are aware that you are using the iFlux Global and the installment plan fully at your own risk.

Mining Node Service Terms

Mining Node Eligibility and Requirements To participate in iFlux Global Mining Node, you must:

- Be at least 15 years of age or the legal age in your jurisdiction
- Have a compatible Chrome browser and stable internet connection
- Provide explicit consent for consensual data collection through the extension
- Maintain one mining node per IP address to ensure fair distribution

Mining Node Operation

- You may operate mining nodes across multiple devices provided each has a unique IP address
- The extension must remain active and connected to earn mining rewards
- Mining rewards are calculated based on data quality, consistency, and network contribution
- Reward rates may vary based on network conditions and geographic distribution

Data Contribution Agreement By using the Mining Node extension, you agree to:

- Share consensual browsing data for AI training and community protection purposes
- Allow iFlux Global to process your data according to our privacy-preserving methods
- Participate in collective intelligence gathering for crypto community security
- Understand that your contribution helps build future threat detection systems

Mining Node Prohibited Activities You may not:

- Use VPNs, proxies, or other tools to manipulate your geographic location
- Run multiple nodes from the same IP address or coordinate with others to game the system
- Provide false or misleading data to the mining network
- Attempt to reverse engineer or interfere with the mining node software
- Use automated tools, bots, or scripts to simulate human browsing behavior

Mining Rewards and Token Claims

- Mining rewards are calculated and updated in real-time in your dashboard
- Tokens must be manually claimed from your dashboard to your connected wallet
- Unclaimed tokens do not expire but remain in your account balance
- Gas fees for claiming tokens are your responsibility
- Token listing will occur automatically when community collectively mines 10% of total supply (444,444 tokens)

Mining Node Suspension and Termination iFlux Global reserves the right to suspend or terminate your mining node access for:

- Violation of these terms or prohibited activities
- Suspicious or fraudulent behavior detected by our anti-cheat systems
- Technical issues that compromise network integrity
- Legal or regulatory requirements

Links to Other Websites

Our Service may contain links to third-party websites or services that are not owned or controlled by the Company.

The Company has no control over and assumes no responsibility for, the content, privacy policies, or practices of any third-party websites or services.

We strongly advise You to read the terms and conditions and privacy policies of any third-party websites or services that You visit.

Termination

We may terminate or suspend Your access immediately, without prior notice or liability, for any reason whatsoever, including without limitation if You breach these Terms and Conditions.

Upon termination, Your right to use the Service will cease immediately.

Limitation of Liability

To the maximum extent permitted by applicable law, in no event shall the Company or its suppliers be liable for any special, incidental, indirect, or consequential damages whatsoever (including, but not limited to, damages for loss of profits, loss of data or other information, for business interruption, for personal injury, loss of privacy arising out of or in any way related to the use of or inability to use the Service), even if the Company or any supplier has been advised of the possibility of such damages and even if the remedy fails of its essential purpose.

"AS IS" and "AS AVAILABLE" Disclaimer

The Service is provided to You "AS IS" and "AS AVAILABLE" and includes all faults and defects without warranty of any kind. To the maximum extent permitted under applicable law, the Company expressly disclaims all warranties, whether express, implied, statutory or otherwise, with respect to the Service.

Mining Node Disclaimer

- Mining rewards are not guaranteed and may vary based on network conditions
- AI protection features are under development and may not be immediately available
- Token value and market performance are subject to market risks beyond our control
- Mining node software is provided "as is" without warranty of specific earnings

iFlux Global Services: APR, Installment, and Mining Operations

iFlux Global will grant you an Installment in Tokens if you provide the required upfront Tokens with a minimum of 15% and a maximum of 85% of your installment asset by transferring them into the iFlux Global service ("Upfront Payment"). All such Tokens are indicated on the iFlux Global service and are subject to revision from time to time.

Token prices are updated continuously based on real-time market data provided by the integrated API of Binance. Our system ensures accurate and transparent pricing for all exchange activities. (Token prices will be shown with a maximum of eight decimal places after being rounded).

An Interest shall commence accruing as of the start date of the Installment Contract ("Start Date"), at the rate determined at the time the Installment Contract is granted and indicated on the iFlux Global service.

A default Installment contract has 10 payment terms. The frequency of interest payments and claim tokens will vary based on the duration of your installment purchase:

Duration	**Interest payment/token claim frequency**
10 days	1 day/time
1 month	3 days/time
2 months	6 days/time
3 months	9 days/time
6 months	18 days/time
12 months	36 days/time

The annual interest rate depends on the upfront deposit that you've made while applying for an installment contract and may vary due to the market conditions.

You are not allowed to create installment contracts that result in a fully offsetting position.

The total balance in the account (in USDT) must always exceed the total upfront value of all active installment contracts (also in USDT, fluctuating based on the market price of the upfront payment token).

You will not be able to start a new installment contract if this balance requirement is not fulfilled.

If significant market fluctuations cause the account balance to fall below the total upfront value, You must either:

- Deposit additional funds into the account, or
- Wait for market adjustments to restore compliance.

If the balance requirement is not met, all affected installment contracts will be put on hold (pending status), restricting any payments or token claims. Penalties will be applied per standard policies.

If the account balance remains insufficient for 2 consecutive hours, all installment contracts will be automatically closed.

The contract liquidation fee will be applied as outlined in the Contract Liquidation policy.

There will be a set penalty fee of 7% if a contract is liquidated before the user has finished the first installment.

You are responsible for payment when the installment is due.

You are not allowed to pay off installments early. You can only make payments and claim tokens for your account when the contractually agreed upon payment term arrives.

12 hours after the time the installment is activated, the first amount of tokens will be unlocked, and you can claim them to your account instantly.

The interest payment starts at 0:00 on the day the payment is due. The system calculates timezone defaults to GMT+0 (UTC).

A late payment penalty will be applied, and the interest payment period will be considered expired if the user does not make payment within 24 hours.

As soon as you settle the entire remaining payment and interest, the installment contract will terminate.

If you fail to fulfill your payment obligations on time, iFlux Global reserves the right to impose the following penalties:

- 1 day late: Penalty 1% of the entire amount of the installment plan, and deduct 1% of the total installment amount from the upfront payment.
- 2 days late: The contract becomes subject to late payment status and the amount owed for that period is deducted from the upfront payment amount.

To guarantee that the installment payment plan remains unchanged, you must pay any current penalties in full at the time of contract restoration.

If you don't make your payments, the installment payment plan will be fully liquidated, and these penalty rules will continue to apply until the upfront payment amount is zero.

In the event that the user fails to make payments by the final payment term, the system will automatically liquidate the contract after notifying the user for a further 15 days.

iFlux Global may provide discounts on the installment contract or any part thereof, such as the principal or the Interest, at any time, under conditions it finds appropriate.

The rate of the upfront payment is compared every second with the currency rate of the liquidity partner which provides trading pairs for this currency.

iFlux Global utilizes thorough market analysis to adjust interest rates based on current conditions. Rates for new installment contracts can be regularly adjusted to reflect market shifts. The agreed-upon installment interest rate is fixed at the signing of the contract and does not change during the term for installment purchase agreements.

Current information on the interest rates for new installment contracts is displayed on the main page of the service - iflux.global while selecting installment terms.

You are allowed to transfer installment contracts to other users by using your iFlux Global Account ID. For an installment contract, the number of transfers is unlimited.

The recipient will receive notification of the transferred installment contract. The transfer will be considered successful only when the recipient agrees to accept it.

The contract transfer request is effective for 15 minutes.

When the contract transfer request is awaiting confirmation, your actions on a contract will be temporarily suspended. They will resume normally if the recipient rejects the transferred contract or requests to transfer the contract expire.

The following installment contracts cannot be transferred:

- Installment contracts with penalties for late payments.
- Terminated installment contracts.

You have the ability to transfer an unlimited number of installment contracts.

Once the installment contract has been approved, you may transfer it at any time, provided it hasn't been terminated and isn't subject to the non-transferable terms listed above.

The recipient will be the owner of all unclaimed tokens in the installment contract after it has been transferred.

There are no fees associated with users transferring installment contracts. If the service fees change, iFlux Global will update the details of these Terms of Service.

iFlux Global offers a daily interest feature that allows you to earn interest based on the average balance in your wallet. a. The default applicable interest rate is 12% APR. The interest earned will be converted to its USDT equivalent at the time of calculation. b. The average balance in the wallet is determined as the arithmetic mean of all recorded balances throughout the day. c. At the end of each day, interest will be automatically credited to your account. d. The interest rate may change based on iFlux Global policies. Users will be informed of any changes in advance.

General Risk Disclaimer

Investment and Financial Risk Disclaimer

- $IFLUX tokens are digital assets subject to high volatility and market risk
- Mining activities do not guarantee profits or specific token values
- Cryptocurrency investments may result in partial or total loss of value
- Users should only participate with funds they can afford to lose

Technology and Service Disclaimer

- Mining node software is experimental technology under continuous development
- AI protection features are in development and not yet available
- Network interruptions or technical issues may affect mining rewards
- No guarantee of uninterrupted service or specific performance levels

Regulatory Compliance Disclaimer

- Users are responsible for compliance with local laws and regulations
- Cryptocurrency activities may be restricted or prohibited in certain jurisdictions
- iFlux Global does not provide legal or tax advice regarding token holdings
- Consult qualified professionals for legal and tax guidance in your jurisdiction

Disputes Resolution

If You have any concerns or disputes about the Service, You agree to first try to resolve the dispute informally by contacting the Company.

Contact us by email: support@iflux.global

Severability and Waiver

Severability If any provision of these Terms is held to be unenforceable or invalid, such provision will be changed and interpreted to accomplish the objectives of such provision to the greatest extent possible under applicable law and the remaining provisions will continue in full force and effect.

Waiver Except as provided herein, the failure to exercise a right or to require the performance of an obligation under this Terms shall not affect a party's ability to exercise such right or require such performance at any time thereafter nor shall be the waiver of a breach constitute a waiver of any subsequent breach.

Translation Interpretation

These Terms and Conditions may have been translated if We have made them available to You through our Service. You agree that the original English text shall prevail in the case of a dispute.

Changes to These Terms and Conditions

We reserve the right, at Our sole discretion, to modify or replace these Terms at any time. If a revision is material We will make reasonable efforts to provide at least 30 days' notice prior

to any new terms taking effect. What constitutes a material change will be determined at Our sole discretion.

By continuing to access or use Our Service after those revisions become effective, You agree to be bound by the revised terms. If You do not agree to the new terms, in whole or in part, please stop using the website and the Service.

Contact Us

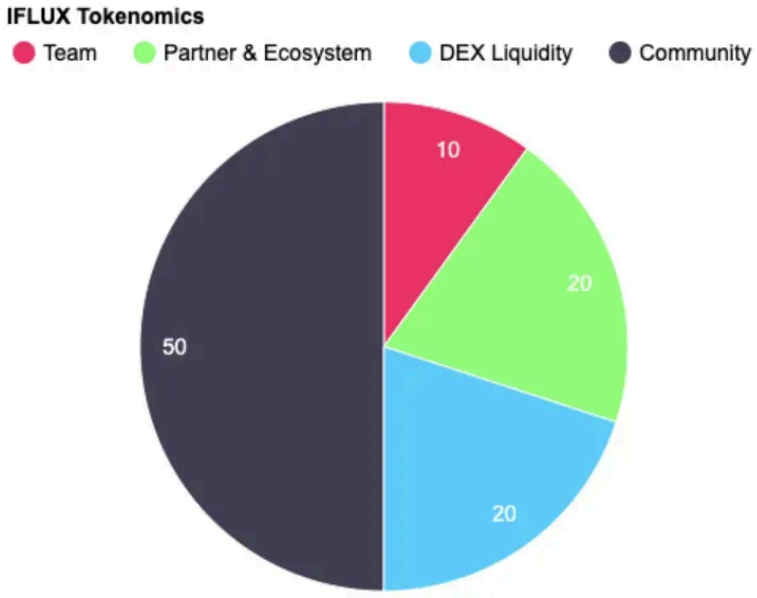

If you have any questions about these Terms and Conditions, You can contact us:

iFlux Global Mining Node

Earn $IFLUX while protecting crypto community

First fair DePIN platform - earn real tokens (not just points) by sharing consensual browsing data that trains AI to detect scams and market intelligence.

- Simply install & connect wallet - start earning immediately
- Share only crypto/security data you choose
- AI learns patterns to protect millions from scams
- 50% tokens to community (guarantee)
- No hardware needed

Your contributions create AI that provides real-time scam warnings, phishing alerts, and market intelligence to millions of crypto users. Zero access to personal data.

Earn what you give with Mining Node!

Need Help? Check out our FAQ or contact our dedicated support team for assistance with setup, mining optimization, or reward claiming.

iFlux Global Mining Node - Pitch Deck Content

Slide 1: Title

iFlux Global Mining Node

DePIN Hub for AI Innovation

Slide 2: Problem Statement

$200B+ - Annual Data Economy Revenue

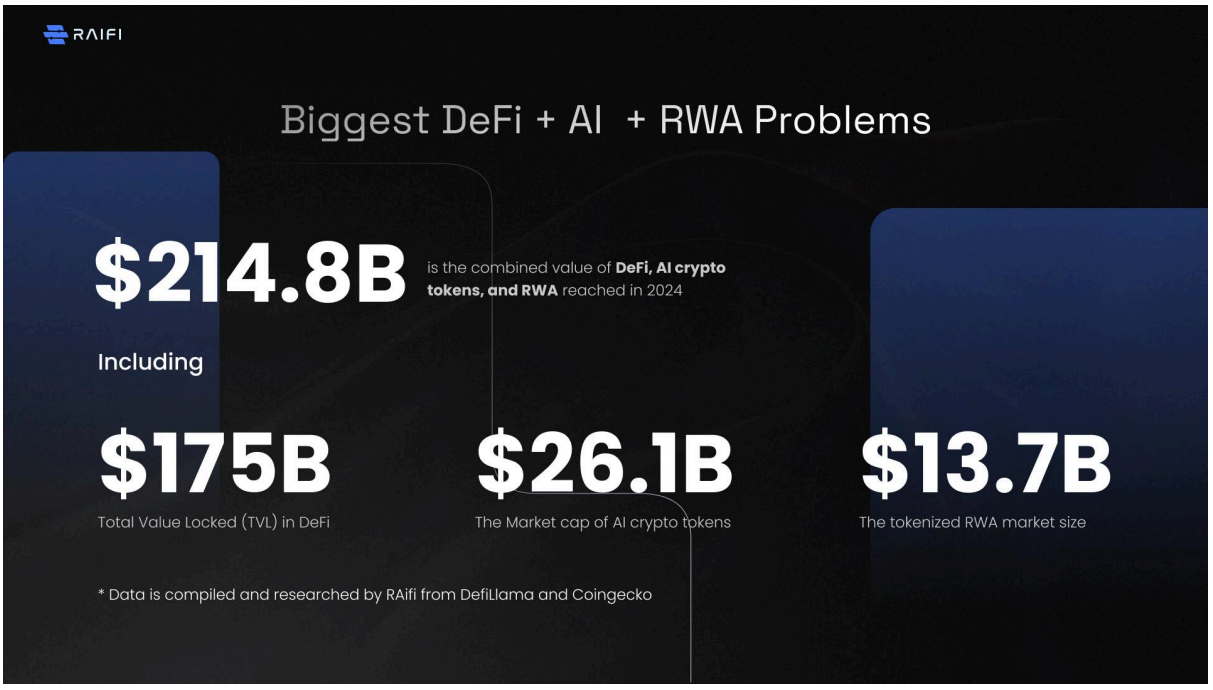

$0 - What Users Get Paid

20-35% - DePIN Community Allocation

96% - Value Extracted by Insiders

Big Tech profits billions from your data. DePIN projects promise fairness but deliver points worth pennies to users while insiders get millions.

Ref:

Slide 3: Market Opportunity

$37B - DePIN Market Cap (2025)

$1.8B - Invested in DePIN Projects

181ZB - Global Data by 2025

$10B+ - Crypto Scam Losses Annually

Massive market hungry for fair data economics + urgent need for crypto community protection = Perfect timing for iFlux CDIN

(Ref tương tự như trên nhưng đổi cấu trúc tí cho nó đỡ bị lặp nhe)

Slide 4: iFlux Global Mining Node

Part of the iFlux Global Ecosystem

Chrome Extension Mining Simple browser extension. No hardware investment. Earn while browsing.

AI Community Protection Train AI to detect scams, protect traders, share market intelligence.

"Earn What You Give" Direct $IFLUX tokens, not points. 50% allocation to actual contributors.

Mining Node is integrated with proven financial platform - not a standalone experiment.

Slide 5: iFlux Global Platform

Token Installment (Main Product) Buy crypto with 15% down payment, zero liquidation risk, zero fee. Revolutionary installment system serving real users with proven revenue model.

Platform Stats

Total users: +50,000

Total Contract Value: $13,216,192.4

Active Ambassadors: 250

Successful Token Installment Contracts: 1842

Mining Node builds on this solid foundation - leveraging existing infrastructure and user trust.

Slide 6: Technology Differentiators

❌ **Traditional DePIN**

- Hardware investment required
- 20-35% community allocation
- Points -> worthless tokens
- No real utility

✅ **iFlux CDIN**

- Browser-based, $0 investment
- 50% community allocation
- Direct $IFLUX rewards
- Platform integration + AI protection

Privacy-First Differential privacy (ε=0.1), zero-knowledge proofs, user consent controls

Federated Learning AI trains on patterns, never sees personal data. Community benefits.

Slide 7: Tokenomics Model

Total Supply: 4.44M $IFLUX

- **Community: 50% (2.22M)**
- **DEX Liquidity: 20% (889K)**
- **Partners: 20% (889K)**
- **Team: 10% (444K)**

(cho cái hình tokenomics bên docs vào thay phần này cũng được nhe Khoa)

70% available at TGE vs industry 15%.

Deflationary: All fees burned forever.

Slide 8: Business Model

Deflationary Tokenomics 100% of fees burned: installment interest + penalties + swap fees = permanent supply reduction

Platform Integration Loop Mining -> $IFLUX -> Platform usage -> VIP status -> Higher mining rewards

Revenue-Backed Distribution Real platform fees fund token distribution, not just speculative VC money

Network Effects More miners -> Better AI -> More protection -> More users -> Higher token value

Slide 9: How-to-Guide

Easy Setup

Download extension -> Start mining -> Earn $IFLUX.

No hardware, no technical skills.

Quality Rewards 7-dimensional scoring.

Quality data = higher rewards. Later on, platform users get VIP multipliers.

(hình step by step hướng dẫn set up bên docs có thể sử dụng lại, nhưng sắp xếp lại nhe Khoa)

Slide 10: Competitive Advantages

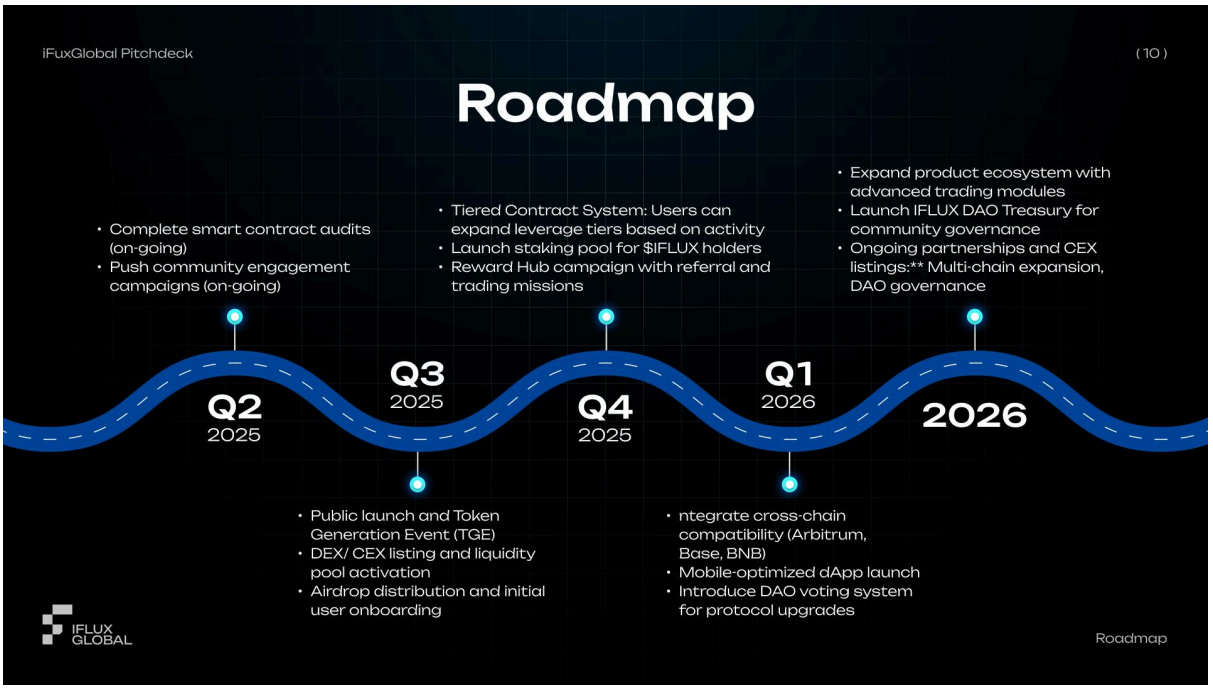

Immediate Value Direct $IFLUX tokens vs competitors' worthless points. Real utility day 1.

Highest Community Allocation 50% vs industry 20-35%. Actually rewards contributors.

Real AI Protection Not just data collection - AI that protects the crypto community from scams.

Revenue-Backed Built on proven platform with real revenue, not just VC funding.

Slide 11: Roadmap

Slide 12: Call to Action

Ready to Build the AI Innovation?

First fair DePIN platform. Real utility. Immediate rewards. Community protection.

"Earn What You Give"

Partner With Us - partnerships@iflux.global

Set up iFlux Global Mining Node

iFlux Global Mining Node lets you easily contribute your browsing data to help build AI protection systems for the crypto community. The network uses consensual data sharing to train AI models that will detect scams and protect users, rewarding you with $IFLUX tokens in return. Simply set it up once, and the mining node handles the rest - you can pause participation anytime.

The network does not access your computer or view your private activities. All iFlux Global Mining Node does is collect anonymized browsing patterns that you explicitly choose to share, which is completely separate from your personal data. That means zero access to your private information, messages, or financial details.

Steps to start mining $IFLUX

Step 1: Sign up at iflux.global with an email address or Google account and turn 2FA.

Step 2: Download the iFlux Global Mining Node Chrome extension from the Chrome Web Store or simply click **[here]**.

Step 3: Install the extension and accept the consensual data sharing agreement - this automatically creates your first mining node.

Step 4: That's it! You'll be able to view your mining status and watch the $IFLUX tokens accumulate. Sit back and relax!

The iFlux Global Mining Node will run in the background while you get rewarded for your consensual data contribution.

Add Multiple Mining Nodes

How to Connect Additional Devices

Expanding your mining network to multiple devices maximizes your earning potential while contributing more valuable data to the AI training process.

Multi-Device Setup Process:

1. **Access Dashboard from New Device**: Log into your iFlux Global account at iflux.global from any additional device (laptop, desktop, etc.)
2. **Navigate to the DePIN Section**: Go to your DePIN dashboard.
3. **Click "Add Node"**: You'll see the option to connect a new device to your mining network
4. **Install Chrome Extension**: Click the "Chrome Extension Node" button, which will redirect you to the Chrome Web Store
5. **Complete Extension Setup**: Download, install, and activate the extension on the new device using your existing account credentials

6. **Automatic Node Registration**: Once activated, the new device appears in your dashboard as an additional mining node

Important Notes:

- Each device requires its own Chrome extension installation
- All devices must use the same iFlux Global account for unified reward tracking
- Each device needs a unique IP address for anti-cheat compliance
- You can add unlimited nodes across different devices and locations, as long as each device has a different IP address.

Mining Rewards and Earnings

How to Earn $IFLUX Tokens

Earning $IFLUX tokens happens through multiple integrated methods within the iFlux ecosystem:

Note: $IFLUX tokens accumulate in your account balance and must be manually claimed to transfer them to your connected wallet. There are no automatic transfers - you control when to claim your earned rewards.

1. Mining Through Browser Extension

Earn tokens by running the Chrome extension and maintaining your network connection across multiple devices.

2. Referral Network Building

Primary Referrals: After setting up mining, you'll receive a referral link to invite others.

Updates will be announced through our official channels as development progresses.

3. Enhanced Contributor Recognition System

Advanced Tier Structure (In Development)

We're developing a comprehensive contributor classification system that will recognize and reward different levels of ecosystem participation. This multi-tiered approach will evaluate various contribution metrics including mining consistency, platform engagement, and community building activities.

The recognition framework will incorporate:

- Mining performance and consistency metrics
- Cross-platform ecosystem participation
- Community contribution scores
- Long-term commitment indicators

Specific tier requirements, multiplier benefits, and qualification criteria are currently being finalized based on network performance data and community feedback. Enhanced rewards and benefits will be available to contributors who demonstrate sustained platform engagement.

Updates will be announced through our official channels as development progresses.

4. Task and Engagement Rewards

Daily Activities: Complete simple tasks for bonus $IFLUX rewards:

- **Daily Check-in**: 1-5 $IFLUX based on streak length (7-day maximum)
- **Social Tasks**: Follow, share, and engage for 1-2 $IFLUX per activity
- **Community Participation**: Join discussions and events for bonus allocations
- **Platform Usage (Bonus Tasks)**: Use other features in the iFlux Global ecosystem for bonus rewards

Token Claiming Process

How to Claim Your $IFLUX Rewards

Wallet Connection Setup:

1. **Connect Your Wallet**: Go to Profile -> Settings -> Wallet Address and click "Connect Wallet"
2. **Choose Wallet Type**: Select MetaMask or Trust Wallet from the available options
3. **Add BSC Network**: In case Binance Smart Chain isn't visible, please add this network to your wallet by navigating to the network dropdown, and select "Add Network". Then, enter the following details
    - Network Name: Binance Smart Chain
    - RPC URL: https://bsc-dataseed.binance.org/
    - Chain ID: 56
    - Symbol: BNB
    - Block Explorer: https://bscscan.com
4. After entering this information, click "Save" to add the BSC network
5. **Add $IFLUX Token**: Import token contract address to make $IFLUX visible in your wallet (address will be provided at launch)

Claiming Your Earned Tokens:

1. Navigate to your dashboard to view your total accumulated $IFLUX balance
2. Click the "Claim" button to initiate the withdrawal process. Make sure you have enough BNB for the gas fee.
3. Confirm the transaction in your connected wallet (MetaMask/Trust Wallet)
4. Tokens will be transferred to your wallet within 5-10 minutes of successful confirmation
5. You can claim any amount at any time - there are no minimum thresholds.

Important Claiming Notes:

- Tokens remain in your dashboard balance until you manually claim them
- You control when to claim - tokens do not transfer automatically
- No expiration date on unclaimed tokens - they remain in your account indefinitely
- Each claim requires a wallet transaction confirmation
- Gas fees for claiming are minimal on BSC network

Important Notes to Remember

Mining Requirements

- **Internet Connection**: Stable internet required for consistent mining rewards
- **Browser Activity**: Extension works best when browser is actively used
- **Account Security**: Enable 2FA and secure your wallet connection
- **Device Limits**: One node per IP address to maintain fair distribution

Reward Optimization

- **Consistent Usage**: Regular daily browsing provides better rewards than sporadic usage
- **Multiple Devices**: Add nodes on different devices/locations for increased earnings
- **Platform Integration**: Active participation in iFlux ecosystem enhances overall rewards
- **Community Engagement**: Complete tasks and maintain referral network for bonus rewards

Technical Considerations

- **Extension Updates**: Keep Chrome extension updated for optimal performance
- **Wallet Connection**: Ensure wallet remains connected for reward tracking
- **Privacy Settings**: Extension respects browser privacy settings and ad blockers
- **Performance Impact**: Minimal system resource usage - no noticeable slowdown

Advanced Network Dynamics

- **Mining Difficulty**: Automatically adjusts based on total network participation and token circulation patterns
- **Anti-Gaming Mechanisms**: Behavioral pattern analysis using machine learning algorithms prevents exploitation
- **Geographic Distribution**: Cross-referenced participation validation ensures fair global representation
- **Quality Assurance**: Temporal consistency scoring maintains data contribution standards

The iFlux Global Mining Node provides the simplest entry point into DePIN participation while offering multiple earning opportunities through platform integration. Start with basic setup and gradually expand your mining network as you become familiar with the system.
